Subject: comment on APD #400749097, for RWF 721-44-28-HMB2

Reed,

Due to the proximity (about 1200' away) of this proposed well to RULISON DEEP #1 (API#045-06877) and about 1100' from the VASSAR/HEATH RMV 229-27 (API#045-07610) we plan to add the following COA to this permit:

(4) Monitor the bradenhead of offset wells RULISON DEEP #1 (API#045-06877) and the VASSAR/HEATH RMV 229-27 (API#045-07610) during completion operations. If at any time during the treatment or the 24-hour post-stimulation period the bradenhead annulus pressure of either offset well increases by more than 200 psig the Operator shall verbally notify the Director, as soon as practicable, but no later than twenty-four (24) hours following such incident. Within fifteen (15) days after the occurrence, the Operator shall submit a Sundry Notice, Form 4, giving all details, including corrective actions taken.

A comment similar to this will be made:

Evaluated offset wells within 1500 feet. Offset well RULISON DEEP #1 (API#045-06877) is 1200' away and completed in the Mesa Verde - Cameo. Cement coverage appears adequate. Also the VASSAR/HEATH RMV 229-27 (API#045-07610) is 1100' away and completed in the Mesa Verde-Cameo, Mancos, Dakota, Morrison and Entrada. Cement coverage appears adequate. Emailed operator regarding bradenhead monitoring.

Let me know if you have any issues with this.

Thank you,

Jay Krabacher
