## Best Management Practices

<b>No</b>	<b>BMP/COA Type</b>	<b>Description</b>
1	Planning	WPX will run triple-combo open hole logs from well TD up to base of surface casing on one of the first wells drilled on a multi-well pad. Remaining wells on the pad will be logged with either cased hole pulsed neutron or triple-combo open hole. Every well will also have a CBL log from well TD up through well surface. Form 5 Completion Reports will identify wells on the pad with triple-combo open hole logs.
2	Interim Reclamation	<ul style="list-style-type: none"> <li>• Install automated emergency response systems (e.g., high tank alarms, emergency shut-down systems, etc.).</li> <li>• Implement fugitive dust control program</li> <li>• Evaluate the utility of soil amendment application to achieve effective reclamation.</li> <li>• Use appropriately diverse reclamation seed mixes that mirror an appropriate reference area for the site being reclaimed where approved by landowner.</li> <li>• Seed during appropriate season to increase likelihood of reclamation success</li> <li>• Apply certified weed free mulch and crimp or tacyfy to remain in place to reclaim areas for seed preservation and moisture retention</li> </ul>
3	Drilling/Completion Operations	<ul style="list-style-type: none"> <li>• Limit parking to already disturbed areas that have not yet been reclaimed</li> </ul>
4	Construction	<ul style="list-style-type: none"> <li>• Surface roads to ensure that the anticipated volume of traffic and the weight and speed of vehicles using the road do not cause environmental damage, including generation of fugitive dust and contribution of sediment to downstream areas.</li> <li>• Salvage topsoil from all road construction and other rights-of-way and re-apply during interim and final reclamation.</li> </ul>
5	Planning	<ul style="list-style-type: none"> <li>• Minimize well pad density to the extent possible</li> </ul>
