Size of tanks = 42,000 bbl - 157' dia

Anticipated timeframe tanks will be on location = March 3, 2015 - December 12, 2015

Due to Bonanza's desire to permit efficiently while simultaneously minimizing surface disturbance and maximizing equipment utilization; we request a little flexibility and "overlap" in our process. Bonanza does not at this time intend to install all of the requested equipment. Operations are currently planned to be routed to a centralized production facility noted on the Location Identification Tab. Our plan for this location is to install the following equipment:  
1 500 bbl oil tank, 1 60 bbl partially buried water vault, 1 ECD and 1 pig launcher.

I hereby certify that the statements made in this form are, to the best of my knowledge, true, correct and complete.

### Best Management Practices

#### No BMP/COA Type

#### Description

1	Construction	The following procedure describes BCEL standard construction practices for setting a partially buried pre-cast cement water vault and new tank battery construction. 1) The excavation will first be lined with 4" of clay or other low permeability soil. 2) A 30 mil liner will be installed on top of the low permeability soil. The 30 mil liner will be a contiguous liner which will underlay the entire tank battery. 3) The tank battery / water vault liner will be keyed into a galvanized steel containment ring installed surrounding the tank battery. 4) Sand bedding will be installed to protect the synthetic liner prior to placing equipment in the containment area.
2	Construction	Bonanza Creek Energy OC acknowledges and will comply with the "COGCC Policy On the Use of Modular Large Volume Tanks in Colorado" dated June 13, 2014.
