COMMENTS:

Great Western intends to flare gas for a short period of time to allow the well to clean up before going to sales. Once the well begins to cut hydrocarbons the test separator will be pressured up and all flow will be run through the test separator. All gas will be flared through a flare stack provided by the flowback vendor and once a sellable amount of gas is being made the gas will be run through our facilities to and through the sales meter. Facilities will be complete and functioning before this phase of the operation begins. The last gas analysis taken on 09/12/2014 shows less than 1 ppm of H2S. Please find the attached report.

H2S REPORTING

Data Fields in this section are intended to document Sample and Location Data associated with the collection of a Gas Sample that is submitted for Laboratory Analysis.

Gas Analysis Report must be attached.

H2S Concentration: _____ in ppm (parts per million) Date of Measurement or Sample Collection _____

Description of Sample Point:

Absolute Open Flow Potential _____ in CFPD (cubic feet per day)

Description of Release Potential and Duration (If flow is not open to the atmosphere, identify the duration in which the container or pipeline would likely be opened for servicing operations.):

Distance to nearest occupied residence, school, church, park, school bus stop, place of business, or other areas where the public could reasonably be expected to frequent: _____

Distance to nearest Federal, State, County, or municipal road or highway owned and principally maintained for public use: _____
