As defined in COGCC 100-Series Rules

Describe what is known about the spill/release event (what happened -- including how it was stopped, contained, and recovered):

The spill was discovered at approximately 7AM on 2/22/15. Condensate was found to be leaking from a tank loadline at the base of the production tank on a loose flange. The flange bolts were tightened and the leak was stopped. Immediately a vacuum truck was dispatched to remove free product from the lined secondary containment. The spill did not leave containment.
