**REPORT OF WORK COMPLETED**

- North Pit (Facility: 425573) - Form 27 (Doc: 2232932) (Rem: 7771)
- South Pit (Facility: 425585) - Form 27 (Doc: 2232933) (Rem: 7772)

Encana Oil & Gas (USA) Inc. (Encana) is submitting this Form 4 (Report of Work Completed and Notification of Completion) to document closure of two lined earthen pits and cuttings disposal on a well pad in the North Parachute area of operation in Garfield County.

Initial pit closure and characterization efforts were carried out in July, 2010. The pit was drained, and the liner and above liner solids were removed for offsite disposal. Below-liner soil conditions were assessed with field observations and each pit was characterized with a 5-point composite sample of the pit bottom submitted to a laboratory for analysis. Sample results identified concentrations/levels above the allowable limits in COGCC Table 910-1 for TPH, benzene, PAH, EC, SAR, pH, and arsenic. A composite sample of the drill cuttings stockpile on location was also collected, with lab results identifying elevated levels of PAH, SAR, pH, and arsenic.

Following identification of below-liner impacts, the pit excavations were left open through the remainder of 2010 and early 2011 to allow hydrocarbon impacts to naturally attenuate through biological processes.

Beginning in June, 2011 both pit cells were further characterized with a series of discrete grab samples. Those samples and field observations confirmed persistent hydrocarbon impacts in below-liner soils in localized portions of each pit. A track-hoe was used to remove visually stained soils from both pits, and stockpile material on the pad to support remediation. Competent bedrock was encountered during the second excavation effort which prevented vertical and lateral pursuit of soil impacts. A final round of grab samples was collected for characterization of the excavations.

The stockpile of material excavated from the pit bottoms was characterized with a composite sample, and was laid out in a thin lift on the pad surface and water and fertilizer were applied to augment natural bioremediation. On August 24, 2011 a composite sample of the stockpile remediation lift demonstrating compliance with TPH limits was collected.

Analytical results are provided in the attached summary table and laboratory reports.

This location and pit excavations occur immediately above or within the Green River Formation. The formation is known for lacustrine fossil beds and oil shale, among other lithology. Lacustrine and marine fossil beds are commonly associated with high background arsenic concentrations, while oil shale is known for elevated levels of heavy end organics, including TPH-DRO and PAH constituents. Encana has collected background samples throughout much of the Piceance with elevated background levels of arsenic, TPH-DRO, and PAH constituents.

### **NOTIFICATION OF COMPLETION**

After excavation efforts were prevented by bedrock from pursuing soil impacts further vertically or laterally, four (4) clearance samples from the pit bottoms and walls were analyzed for TPH. One pit bottom sample from the north pit remained above the allowable limit. The samples in question were collected from the unrecoverable residual material on top of the bedrock. They are not representative of the bedrock or the geology beneath the bedrock, and only demonstrate that the removed material had hydrocarbon impacts. Encana requests that the COGCC consider the physical conditions associated with this pit closure project and sampled material as an alternative to the allowable limit for TPH identified in Table 910-1.

PAH constituent concentrations in the pit bottom and cuttings stockpile on this location were above the allowable concentrations in Table 910-1, however the pit excavations occur within the Green River Formation, where the presence of heavy-end organic (TPH-DRO and PAH) background concentrations is common. Heavy-end organic compounds are not readily soluble in water and are typically entrained in soil and shale. Based on the stability of heavy-end organic constituents, the naturally occurring geologic conditions, and Footnote 1 to COGCC Table 910-1, Encana requests the COGCC consider the PAH in the pit bottom and drill cuttings consistent with background in the area.

Arsenic concentrations in the pit bottom and stockpile, and drill cuttings stockpile are above the allowable concentration in Table 910-1, but are within the range of background values for this area. Based on these results and Footnote 1 to COGCC Table 910-1, Encana requests that the COGCC consider the higher range of background arsenic values as the allowable concentration for this constituent.

With regards to the inorganic constituents (SAR, EC, pH), the material represented by these samples are within the former pit footprint, are greater than five feet below the current working surface, and will be at an even greater depth below the final reclaimed working surface where the constituents will have no effect on revegetation efforts. Encana requests that the COGCC consider the reclamation purpose of listing these constituents and the physical disposition of these materials as an alternative to the allowable levels listed in COGCC Table 910-1.

After bedrock refusal and receipt of applicable clearance samples, the drill cuttings stockpile (approximately 800 cubic yards) and pit spoil stockpile were placed in the pit excavations, and the pits were backfilled and reclaimed.

If the information provided here is satisfactory, please close the associated remediation project, and pit facility, and provide documentation of these record closures.

## CASE NARRATIVE

**Client: EnCana Oil & Gas, Inc. (USA)**

**Project: M33 CoP Diligence**

**Report Number: 280-5234-1**

With the exceptions noted as flags or footnotes, standard analytical protocols were followed in the analysis of the samples and no problems were encountered or anomalies observed. In addition all laboratory quality control samples were within established control limits, with any exceptions noted below. Each sample was analyzed to achieve the lowest possible reporting limit within the constraints of the method. In some cases, due to interference or analytes present at high concentrations, samples were diluted. For diluted samples, the reporting limits are adjusted relative to the dilution required.

Calculations are performed before rounding to avoid round-off errors in calculated results.

All holding times were met and proper preservation noted for the methods performed on these samples, unless otherwise detailed in the individual sections below.

### **RECEIPT**

The samples were received on 07/10/2010; the samples arrived in good condition, properly preserved and on ice. The temperature of the coolers at receipt were 3.1 and 1.7 degrees C.

The hexavalent chromium analyses were performed by TestAmerica Chicago and the results have been included in the report. Chicago Laboratory: 2417 Bond Street; University Park, IL 60484; Phone: 708.534.5200.

### **VOLATILE ORGANIC COMPOUNDS (GC-MS)**

Samples M33-NW BACK-070810 (280-5234-2), M33-N. PIT BOTTOM-070810 (280-5234-3), M33-S. PIT BOTTOM-070810 (280-5234-4) and M33-CUTTINGS-070810 (280-5234-5) were analyzed for volatile organic compounds (GC-MS) in accordance with EPA SW-846 Method 8260B. The samples were analyzed on 07/15/2010 and 07/16/2010.

Sample M33-S. PIT BOTTOM-070810 (280-5234-4) exhibited a surrogate recovery below the control limits for dibromofluoromethane. Sample M33-CUTTINGS-070810 (280-5234-5) exhibited a surrogate recovery above the control limits for 4-bromofluorobenzene. Evidence of matrix interferences were present for both samples causing the surrogate failures.

The MS/MSD associated with analytical batch 23266 was performed on an unrelated sample and exhibited percent recoveries below the control limitis for surrogate dibromofluoromethane. The acceptable LCS analyses data indicated the analytical system was within control; therefore corrective action was deemed unnecessary.

The MS/MSD associated with analytical batch 23407 was performed on an unrelated sample and exhibited an RPD value above the control limits for ethylbenzene. The acceptable MS/MSD and LCS percent recoveries indicated the analytical system was within control; therefore corrective action was deemed unnecessary.

No other difficulties were encountered during the VOC analyses.

All other quality control parameters were within the acceptance limits.

### **SEMOVOLATILE ORGANIC COMPOUNDS (GC-MS)**

Samples M33-NW BACK-070810 (280-5234-2), M33-N. PIT BOTTOM-070810 (280-5234-3), M33-S. PIT BOTTOM-070810 (280-5234-4) and M33-CUTTINGS-070810 (280-5234-5) were analyzed for semivolatile organic compounds (GC-MS) in accordance with EPA SW-846 Method 8270C. The samples were prepared on 07/11/2010 and analyzed on 08/02/2010.

No difficulties were encountered during the SVOC analyses.

All quality control parameters were within the acceptance limits.

### **GASOLINE RANGE ORGANICS (GRO)**

Samples M33-NW BACK-070810 (280-5234-2), M33-N. PIT BOTTOM-070810 (280-5234-3), M33-S. PIT BOTTOM-070810 (280-5234-4) and M33-CUTTINGS-070810 (280-5234-5) were analyzed for gasoline range organics (GRO) in accordance with EPA SW-846 Method 8015B - GRO. The samples were analyzed on 07/14/2010 and 07/15/2010.

Samples M33-N. PIT BOTTOM-070810 (280-5234-3)[5X] and M33-S. PIT BOTTOM-070810 (280-5234-4)[10X] required dilution prior to analysis due to the abundance of target analytes. The reporting limits have been adjusted accordingly. Additionally the surrogate recoveries for these samples were below the control limits due to the dilutions performed.

The MS/MSD was performed on an unrelated sample and exhibited percent recoveries below the control limits for GRO (C6-C10). The acceptable LCS and LCSD analyses data indicated the analytical system was within control; therefore corrective action was deemed unnecessary.

No other difficulties were encountered during the GRO analyses.

All other quality control parameters were within the acceptance limits.

#### **DIESEL RANGE ORGANICS**

Samples M33-NW BACK-070810 (280-5234-2), M33-N. PIT BOTTOM-070810 (280-5234-3), M33-S. PIT BOTTOM-070810 (280-5234-4) and M33-CUTTINGS-070810 (280-5234-5) were analyzed for diesel range organics in accordance with EPA SW-846 Method 8015B - DRO. The samples were prepared on 07/11/2010 and analyzed on 07/12/2010 and 07/13/2010.

Samples M33-N. PIT BOTTOM-070810 (280-5234-3)[10X] and M33-S. PIT BOTTOM-070810 (280-5234-4)[10X] required dilution prior to analysis, due to the abundance of target compounds. The reporting limits have been adjusted accordingly. Additionally the surrogate recoveries were below the control limits due to the dilutions performed.

No other difficulties were encountered during the DRO analyses.

All other quality control parameters were within the acceptance limits.

#### **SODIUM ABSORPTION RATIO**

Samples M33-NW BACK-070810 (280-5234-2), M33-N. PIT BOTTOM-070810 (280-5234-3), M33-S. PIT BOTTOM-070810 (280-5234-4) and M33-CUTTINGS-070810 (280-5234-5) were analyzed for Sodium Absorption Ratio in accordance with USDA Handbook 60 - 20B. The samples were prepared on 07/20/2010 and analyzed on 07/23/2010.

No difficulties were encountered during the SAR analyses.

All quality control parameters were within the acceptance limits.

#### **TOTAL METALS**

Samples M33-NW BACK-070810 (280-5234-2), M33-N. PIT BOTTOM-070810 (280-5234-3), M33-S. PIT BOTTOM-070810 (280-5234-4) and M33-CUTTINGS-070810 (280-5234-5) were analyzed for total metals in accordance with EPA SW-846 Method 6010B. The samples were prepared on 07/21/2010 and analyzed on 07/22/2010.

Chromium was detected in method blank MB 280-23479/1-A at a level that was above the method detection limit but below the reporting limit. The samples exhibited detections greater than ten times the detection in the Method Blank. The value should be considered an estimate, and has been flagged "J". If the associated sample reported a result above the MDL and/or RL, the result has been "B" flagged.

The serial dilution performed for the following sample(s) in batch 23824 was outside control limits for Ba, Cr, Cu, Ni, and Zn: M33-CUTTINGS-070810, M33-N. PIT BOTTOM-070810, M33-NW BACK-070810, M33-S. PIT BOTTOM-070810

No other difficulties were encountered during the metals analyses.

All other quality control parameters were within the acceptance limits.

#### **TOTAL METALS ICP/MS - Arsenic**

Samples M33-SW BACK-070810 (280-5234-1), M33-NW BACK-070810 (280-5234-2), M33-N. PIT BOTTOM-070810 (280-5234-3), M33-S. PIT BOTTOM-070810 (280-5234-4) and M33-CUTTINGS-070810 (280-5234-5) were analyzed for total metals in accordance with EPA SW-846 Method 6020. The samples were prepared on 07/21/2010 and analyzed on 07/23/2010.

No difficulties were encountered during the metals analyses.

All quality control parameters were within the acceptance limits.

#### **TOTAL MERCURY**

Samples M33-NW BACK-070810 (280-5234-2), M33-N. PIT BOTTOM-070810 (280-5234-3), M33-S. PIT BOTTOM-070810 (280-5234-4) and M33-CUTTINGS-070810 (280-5234-5) were analyzed for total mercury in accordance with EPA SW-846 Method 7471A. The samples were prepared and analyzed on 07/19/2010.

The MS/MSD was performed on an unrelated sample and exhibited percent recoveries above the control limits for mercury. The acceptable LCS analyses data indicated the analytical system was within control; therefore corrective action was deemed unnecessary.

No other difficulties were encountered during the mercury analyses.

All other quality control parameters were within the acceptance limits.

**HEXAVALENT CHROMIUM**

Samples M33-NW BACK-070810 (280-5234-2), M33-N. PIT BOTTOM-070810 (280-5234-3), M33-S. PIT BOTTOM-070810 (280-5234-4) and M33-CUTTINGS-070810 (280-5234-5) were analyzed for hexavalent chromium in accordance with EPA SW-846 Method 7196A. The samples were prepared on 07/15/2010 and analyzed on 07/16/2010.

The MS/MSD was performed on an unrelated sample and the MSD exhibited a percent recovery below the control limits for hexavalent chromium. The MS/MSD exhibited an RPD value above the control limits for hexavalent chromium. The acceptable LCS analyses data indicated the analytical system was within control; therefore corrective action was deemed unnecessary.

No other difficulties were encountered during the hexavalent chromium analyses.

All other quality control parameters were within the acceptance limits.

**TRIVALENT CHROMIUM**

Samples M33-NW BACK-070810 (280-5234-2), M33-N. PIT BOTTOM-070810 (280-5234-3), M33-S. PIT BOTTOM-070810 (280-5234-4) and M33-CUTTINGS-070810 (280-5234-5) were analyzed for Trivalent Chromium in accordance with SW-846 7196A\_CR3. The samples were analyzed on 07/27/2010.

No difficulties were encountered during the trivalent chromium analyses.

All quality control parameters were within the acceptance limits.

**pH**

Samples M33-NW BACK-070810 (280-5234-2), M33-N. PIT BOTTOM-070810 (280-5234-3), M33-S. PIT BOTTOM-070810 (280-5234-4) and M33-CUTTINGS-070810 (280-5234-5) were analyzed for pH in accordance with EPA SW-846 Method 9045C. The samples were leached on 07/13/2010 and analyzed on 07/13/2010.

No difficulties were encountered during the pH analyses.

All quality control parameters were within the acceptance limits.

**SPECIFIC CONDUCTANCE**

Samples M33-NW BACK-070810 (280-5234-2), M33-N. PIT BOTTOM-070810 (280-5234-3), M33-S. PIT BOTTOM-070810 (280-5234-4) and M33-CUTTINGS-070810 (280-5234-5) were analyzed for specific conductance in accordance with EPA SW-846 9050A. The samples were leached on 07/16/2010 and analyzed on 07/16/2010.

No difficulties were encountered during the conductivity analyses.

All quality control parameters were within the acceptance limits.

## DATA REPORTING QUALIFIERS

Client: EnCana Oil & Gas, Inc. (USA)

Job Number: 280-5234-1

| Lab Section    | Qualifier | Description   |
|----------------|-----------|---|
| GC/MS VOA      | J         | Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.  |
|                | F         | RPD of the MS and MSD exceeds the control limits  |
|                | X         | Surrogate is outside control limits   |
| GC/MS Semi VOA | K         | Benzo (b&k) fluoranthene are unresolved due to matrix, result is reported as Benzo(b)fluoranthene.  |
|                | J         | Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.  |
| GC VOA         | F         | MS or MSD exceeds the control limits  |
|                | D         | Surrogate or matrix spike recoveries were not obtained because the extract was diluted for analysis; also compounds analyzed at a dilution may be flagged with a D. |
| GC Semi VOA    | J         | Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.  |
|                | D         | Sample results are obtained from a dilution; the surrogate or matrix spike recoveries reported are calculated from diluted samples.                                 |
| Metals         | B         | Compound was found in the blank and sample.   |
|                | F         | MS or MSD exceeds the control limits  |
|                | J         | Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.  |

| Question   | T / F/ NA | Comment   |
|--|-----------|---|
| Radioactivity either was not measured or, if measured, is at or below background | True      |   |
| The cooler's custody seal, if present, is intact.                                | True      |   |
| The cooler or samples do not appear to have been compromised or tampered with.   | True      |   |
| Samples were received on ice.  | True      |   |
| Cooler Temperature is acceptable.  | True      |   |
| Cooler Temperature is recorded.  | True      |   |
| COC is present.  | True      |   |
| COC is filled out in ink and legible.  | True      |   |
| COC is filled out with all pertinent information.                                | False     | COC FOR E06-CUTTINGS-070810 SAYS 1 CONTAINER, 3 CONTAINERS REC. |
| Is the Field Sampler's name present on COC?                                      | True      |   |
| There are no discrepancies between the sample IDs on the containers and the COC. | True      |   |
| Samples are received within Holding Time.  | True      |   |
| Sample containers have legible labels.   | True      |   |
| Containers are not broken or leaking.  | True      |   |
| Sample collection date/times are provided.                                       | True      |   |
| Appropriate sample containers are used.  | True      |   |
| Sample bottles are completely filled.  | True      |   |
| Sample Preservation Verified   | True      |   |
| There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs | True      |   |
| VOA sample vials do not have headspace or bubble is <6mm (1/4") in diameter.     | True      |   |
| If necessary, staff have been informed of any short hold time or quick TAT needs | True      |   |
| Multiphasic samples are not present.   | True      |   |
| Samples do not require splitting or compositing.                                 | True      |   |

**Attachment A**  
**List of Analytes with QC Qualifiers**

| Sample Number | Work Group | Sample Type | Analyte     | Run ID   | Qualifier |
|---------------|------------|-------------|-------------|----------|-----------|
| L519110-01    | WG539036   | SAMP        | o-Terphenyl | R1718450 | J7        |
| L519110-03    | WG539036   | SAMP        | o-Terphenyl | R1718450 | J7        |
| L519110-05    | WG539037   | SAMP        | o-Terphenyl | R1718634 | J7        |

Attachment B  
Explanation of QC Qualifier Codes

| Qualifier | Meaning  |
|-----------|--|
| J7        | Surrogate recovery limits cannot be evaluated; surrogates were diluted out |

Qualifier Report Information

ESC utilizes sample and result qualifiers as set forth by the EPA Contract Laboratory Program and as required by most certifying bodies including NELAC. In addition to the EPA qualifiers adopted by ESC, we have implemented ESC qualifiers to provide more information pertaining to our analytical results. Each qualifier is designated in the qualifier explanation as either EPA or ESC. Data qualifiers are intended to provide the ESC client with more detailed information concerning the potential bias of reported data. Because of the wide range of constituents and variety of matrices incorporated by most EPA methods, it is common for some compounds to fall outside of established ranges. These exceptions are evaluated and all reported data is valid and useable "unless qualified as 'R' (Rejected)."

Definitions

Accuracy - The relationship of the observed value of a known sample to the true value of a known sample. Represented by percent recovery and relevant to samples such as: control samples, matrix spike recoveries, surrogate recoveries, etc.

Precision - The agreement between a set of samples or between duplicate samples. Relates to how close together the results are and is represented by Relative Percent Difference.

Surrogate - Organic compounds that are similar in chemical composition, extraction, and chromatography to analytes of interest. The surrogates are used to determine the probable response of the group of analytes that are chemically related to the surrogate compound. Surrogates are added to the sample and carried through all stages of preparation and analyses.

TIC - Tentatively Identified Compound: Compounds detected in samples that are not target compounds, internal standards, system monitoring compounds, or surrogates.

The data package includes a summary of the analytic results of the quality control samples required by the SW-846 or CWA methods. The quality control samples include a method blank, a laboratory control sample, and the matrix spike/matrix spike duplicate analysis. If a target parameter is outside the method limits, every sample that is effected is flagged with the appropriate qualifier in Appendix B of the analytic report.

Method Blank - an aliquot of reagent water carried through the entire analytic process. The method blank results indicate if any possible contamination exposure during the sample handling, digestion or extraction process, and analysis. Concentrations of target analytes above the reporting limit in the method blank are qualified with the "B" qualifier.

Laboratory Control Sample - is a sample of known concentration that is carried through the digestion/extraction and analysis process. The percent recovery, expressed as a percentage of the theoretical concentration, has statistical control limits indicating that the analytic process is "in control". If a target analyte is outside the control limits for the laboratory control sample or any other control sample, the parameter is flagged with a "J4" qualifier for all effected samples.

Matrix Spike and Matrix Spike Duplicate - is two aliquots of an environmental sample that is spiked with known concentrations of target analytes. The percent recovery of the target analytes also has statistical control limits. If any recoveries that are outside the method control limits, the sample that was selected for matrix spike/matrix spike duplicate analysis is flagged with either a "J5" or a "J6". The relative percent difference (%RPD) between the matrix spike and the matrix spike duplicate recoveries is all calculated. If the RPD is above the method limit, the effected samples are flagged with a "J3" qualifier.

**List of Analytes with QC Qualifiers**

| Sample Number | Work Group | Sample Type | Analyte     | Run ID   | Qualifier |
|---------------|------------|-------------|-------------|----------|-----------|
| L519114-01    | WG539037   | SAMP        | o-Terphenyl | R1718634 | J7        |

Attachment B  
Explanation of QC Qualifier Codes

| Qualifier | Meaning  |
|-----------|--|
| J7        | Surrogate recovery limits cannot be evaluated; surrogates were diluted out |

Qualifier Report Information

ESC utilizes sample and result qualifiers as set forth by the EPA Contract Laboratory Program and as required by most certifying bodies including NELAC. In addition to the EPA qualifiers adopted by ESC, we have implemented ESC qualifiers to provide more information pertaining to our analytical results. Each qualifier is designated in the qualifier explanation as either EPA or ESC. Data qualifiers are intended to provide the ESC client with more detailed information concerning the potential bias of reported data. Because of the wide range of constituents and variety of matrices incorporated by most EPA methods, it is common for some compounds to fall outside of established ranges. These exceptions are evaluated and all reported data is valid and useable "unless qualified as 'R' (Rejected)."

Definitions

Accuracy - The relationship of the observed value of a known sample to the true value of a known sample. Represented by percent recovery and relevant to samples such as: control samples, matrix spike recoveries, surrogate recoveries, etc.

Precision - The agreement between a set of samples or between duplicate samples. Relates to how close together the results are and is represented by Relative Percent Difference.

Surrogate - Organic compounds that are similar in chemical composition, extraction, and chromatography to analytes of interest. The surrogates are used to determine the probable response of the group of analytes that are chemically related to the surrogate compound. Surrogates are added to the sample and carried through all stages of preparation and analyses.

TIC - Tentatively Identified Compound: Compounds detected in samples that are not target compounds, internal standards, system monitoring compounds, or surrogates.

The data package includes a summary of the analytic results of the quality control samples required by the SW-846 or CWA methods. The quality control samples include a method blank, a laboratory control sample, and the matrix spike/matrix spike duplicate analysis. If a target parameter is outside the method limits, every sample that is effected is flagged with the appropriate qualifier in Appendix B of the analytic report.

Method Blank - an aliquot of reagent water carried through the entire analytic process. The method blank results indicate if any possible contamination exposure during the sample handling, digestion or extraction process, and analysis. Concentrations of target analytes above the reporting limit in the method blank are qualified with the "B" qualifier.

Laboratory Control Sample - is a sample of known concentration that is carried through the digestion/extraction and analysis process. The percent recovery, expressed as a percentage of the theoretical concentration, has statistical control limits indicating that the analytic process is "in control". If a target analyte is outside the control limits for the laboratory control sample or any other control sample, the parameter is flagged with a "J4" qualifier for all effected samples.

Matrix Spike and Matrix Spike Duplicate - is two aliquots of an environmental sample that is spiked with known concentrations of target analytes. The percent recovery of the target analytes also has statistical control limits. If any recoveries that are outside the method control limits, the sample that was selected for matrix spike/matrix spike duplicate analysis is flagged with either a "J5" or a "J6". The relative percent difference (%RPD) between the matrix spike and the matrix spike duplicate recoveries is all calculated. If the RPD is above the method limit, the effected samples are flagged with a "J3" qualifier.

The data package includes a summary of the analytic results of the quality control samples required by the SW-846 or CWA methods. The quality control samples include a method blank, a laboratory control sample, and the matrix spike/matrix spike duplicate analysis. If a target parameter is outside the method limits, every sample that is effected is flagged with the appropriate qualifier in Appendix B of the analytic report.

Method Blank - an aliquot of reagent water carried through the entire analytic process. The method blank results indicate if any possible contamination exposure during the sample handling, digestion or extraction process, and analysis. Concentrations of target analytes above the reporting limit in the method blank are qualified with the "B" qualifier.

Laboratory Control Sample - is a sample of known concentration that is carried through the digestion/extraction and analysis process. The percent recovery, expressed as a percentage of the theoretical concentration, has statistical control limits indicating that the analytic process is "in control". If a target analyte is outside the control limits for the laboratory control sample or any other control sample, the parameter is flagged with a "J4" qualifier for all effected samples.

Matrix Spike and Matrix Spike Duplicate - is two aliquots of an environmental sample that is spiked with known concentrations of target analytes. The percent recovery of the target analytes also has statistical control limits. If any recoveries that are outside the method control limits, the sample that was selected for matrix spike/matrix spike duplicate analysis is flagged with either a "J5" or a "J6". The relative percent difference (%RPD) between the matrix spike and the matrix spike duplicate recoveries is all calculated. If the RPD is above the method limit, the effected samples are flagged with a "J3" qualifier.

**Attachment A**  
**List of Analytes with QC Qualifiers**

| Sample Number | Work Group | Sample Type | Analyte          | Run ID   | Qualifier |
|---------------|------------|-------------|------------------|----------|-----------|
| L521118-02    | WG540795   | SAMP        | p-Terphenyl-d14  | R1728470 | J7        |
| L521118-06    | WG540795   | SAMP        | 2-Fluorobiphenyl | R1728470 | J1        |

Attachment B  
Explanation of QC Qualifier Codes

| Qualifier | Meaning   |
|-----------|---|
| J1        | Surrogate recovery limits have been exceeded; values are outside upper control limits |
| J7        | Surrogate recovery limits cannot be evaluated; surrogates were diluted out            |

Qualifier Report Information

ESC utilizes sample and result qualifiers as set forth by the EPA Contract Laboratory Program and as required by most certifying bodies including NELAC. In addition to the EPA qualifiers adopted by ESC, we have implemented ESC qualifiers to provide more information pertaining to our analytical results. Each qualifier is designated in the qualifier explanation as either EPA or ESC. Data qualifiers are intended to provide the ESC client with more detailed information concerning the potential bias of reported data. Because of the wide range of constituents and variety of matrices incorporated by most EPA methods, it is common for some compounds to fall outside of established ranges. These exceptions are evaluated and all reported data is valid and useable "unless qualified as 'R' (Rejected)."

Definitions

Accuracy - The relationship of the observed value of a known sample to the true value of a known sample. Represented by percent recovery and relevant to samples such as: control samples, matrix spike recoveries, surrogate recoveries, etc.

Precision - The agreement between a set of samples or between duplicate samples. Relates to how close together the results are and is represented by Relative Percent Difference.

Surrogate - Organic compounds that are similar in chemical composition, extraction, and chromatography to analytes of interest. The surrogates are used to determine the probable response of the group of analytes that are chemically related to the surrogate compound. Surrogates are added to the sample and carried through all stages of preparation and analyses.

TIC - Tentatively Identified Compound: Compounds detected in samples that are not target compounds, internal standards, system monitoring compounds, or surrogates.

The data package includes a summary of the analytic results of the quality control samples required by the SW-846 or CWA methods. The quality control samples include a method blank, a laboratory control sample, and the matrix spike/matrix spike duplicate analysis. If a target parameter is outside the method limits, every sample that is effected is flagged with the appropriate qualifier in Appendix B of the analytic report.

Method Blank - an aliquot of reagent water carried through the entire analytic process. The method blank results indicate if any possible contamination exposure during the sample handling, digestion or extraction process, and analysis. Concentrations of target analytes above the reporting limit in the method blank are qualified with the "B" qualifier.

Laboratory Control Sample - is a sample of known concentration that is carried through the digestion/extraction and analysis process. The percent recovery, expressed as a percentage of the theoretical concentration, has statistical control limits indicating that the analytic process is "in control". If a target analyte is outside the control limits for the laboratory control sample or any other control sample, the parameter is flagged with a "J4" qualifier for all effected samples.

Matrix Spike and Matrix Spike Duplicate - is two aliquots of an environmental sample that is spiked with known concentrations of target analytes. The percent recovery of the target analytes also has statistical control limits. If any recoveries that are outside the method control limits, the sample that was selected for matrix spike/matrix spike duplicate analysis is flagged with either a "J5" or a "J6". The relative percent difference (%RPD) between the matrix spike and the matrix spike duplicate recoveries is all calculated. If the RPD is above the method limit, the effected samples are flagged with a "J3" qualifier.

Attachment B  
Explanation of QC Qualifier Codes

| Qualifier | Meaning  |
|-----------|--|
| J7        | Surrogate recovery limits cannot be evaluated; surrogates were diluted out   |
| O         | (ESC) Sample diluted due to matrix interferences that impaired the ability to make an accurate analytical determination. The detection limit is elevated in order to reflect the necessary dilution. |

Qualifier Report Information

ESC utilizes sample and result qualifiers as set forth by the EPA Contract Laboratory Program and as required by most certifying bodies including NELAC. In addition to the EPA qualifiers adopted by ESC, we have implemented ESC qualifiers to provide more information pertaining to our analytical results. Each qualifier is designated in the qualifier explanation as either EPA or ESC. Data qualifiers are intended to provide the ESC client with more detailed information concerning the potential bias of reported data. Because of the wide range of constituents and variety of matrices incorporated by most EPA methods, it is common for some compounds to fall outside of established ranges. These exceptions are evaluated and all reported data is valid and useable "unless qualified as 'R' (Rejected)."

Definitions

Accuracy - The relationship of the observed value of a known sample to the true value of a known sample. Represented by percent recovery and relevant to samples such as: control samples, matrix spike recoveries, surrogate recoveries, etc.

Precision - The agreement between a set of samples or between duplicate samples. Relates to how close together the results are and is represented by Relative Percent Difference.

Surrogate - Organic compounds that are similar in chemical composition, extraction, and chromatography to analytes of interest. The surrogates are used to determine the probable response of the group of analytes that are chemically related to the surrogate compound. Surrogates are added to the sample and carried through all stages of preparation and analyses.

TIC - Tentatively Identified Compound: Compounds detected in samples that are not target compounds, internal standards, system monitoring compounds, or surrogates.

The data package includes a summary of the analytic results of the quality control samples required by the SW-846 or CWA methods. The quality control samples include a method blank, a laboratory control sample, and the matrix spike/matrix spike duplicate analysis. If a target parameter is outside the method limits, every sample that is effected is flagged with the appropriate qualifier in Appendix B of the analytic report.

Method Blank - an aliquot of reagent water carried through the entire analytic process. The method blank results indicate if any possible contamination exposure during the sample handling, digestion or extraction process, and analysis. Concentrations of target analytes above the reporting limit in the method blank are qualified with the "B" qualifier.

Laboratory Control Sample - is a sample of known concentration that is carried through the digestion/extraction and analysis process. The percent recovery, expressed as a percentage of the theoretical concentration, has statistical control limits indicating that the analytic process is "in control". If a target analyte is outside the control limits for the laboratory control sample or any other control sample, the parameter is flagged with a "J4" qualifier for all effected samples.

Matrix Spike and Matrix Spike Duplicate - is two aliquots of an environmental sample that is spiked with known concentrations of target analytes. The percent recovery of the target analytes also has statistical control limits. If any recoveries that are outside the method control limits, the sample that was selected for matrix spike/matrix spike duplicate analysis is flagged with either a "J5" or a "J6". The relative percent difference (%RPD) between the matrix spike and the matrix spike duplicate recoveries is all calculated. If the RPD is above the method limit, the effected samples are flagged with a "J3" qualifier.

The data package includes a summary of the analytic results of the quality control samples required by the SW-846 or CWA methods. The quality control samples include a method blank, a laboratory control sample, and the matrix spike/matrix spike duplicate analysis. If a target parameter is outside the method limits, every sample that is effected is flagged with the appropriate qualifier in Appendix B of the analytic report.

**Method Blank** - an aliquot of reagent water carried through the entire analytic process. The method blank results indicate if any possible contamination exposure during the sample handling, digestion or extraction process, and analysis. Concentrations of target analytes above the reporting limit in the method blank are qualified with the "B" qualifier.

**Laboratory Control Sample** - is a sample of known concentration that is carried through the digestion/extraction and analysis process. The percent recovery, expressed as a percentage of the theoretical concentration, has statistical control limits indicating that the analytic process is "in control". If a target analyte is outside the control limits for the laboratory control sample or any other control sample, the parameter is flagged with a "J4" qualifier for all effected samples.

**Matrix Spike and Matrix Spike Duplicate** - is two aliquots of an environmental sample that is spiked with known concentrations of target analytes. The percent recovery of the target analytes also has statistical control limits. If any recoveries that are outside the method control limits, the sample that was selected for matrix spike/matrix spike duplicate analysis is flagged with either a "J5" or a "J6". The relative percent difference (%RPD) between the matrix spike and the matrix spike duplicate recoveries is all calculated. If the RPD is above the method limit, the effected samples are flagged with a "J3" qualifier.

Attachment B  
Explanation of QC Qualifier Codes

| Qualifier | Meaning   |
|-----------|---|
| J2        | Surrogate recovery limits have been exceeded; values are outside lower control limits                 |
| J5        | The sample matrix interfered with the ability to make any accurate determination; spike value is high |

Qualifier Report Information

ESC utilizes sample and result qualifiers as set forth by the EPA Contract Laboratory Program and as required by most certifying bodies including NELAC. In addition to the EPA qualifiers adopted by ESC, we have implemented ESC qualifiers to provide more information pertaining to our analytical results. Each qualifier is designated in the qualifier explanation as either EPA or ESC. Data qualifiers are intended to provide the ESC client with more detailed information concerning the potential bias of reported data. Because of the wide range of constituents and variety of matrices incorporated by most EPA methods, it is common for some compounds to fall outside of established ranges. These exceptions are evaluated and all reported data is valid and useable "unless qualified as 'R' (Rejected)."

Definitions

Accuracy - The relationship of the observed value of a known sample to the true value of a known sample. Represented by percent recovery and relevant to samples such as: control samples, matrix spike recoveries, surrogate recoveries, etc.

Precision - The agreement between a set of samples or between duplicate samples. Relates to how close together the results are and is represented by Relative Percent Difference.

Surrogate - Organic compounds that are similar in chemical composition, extraction, and chromatography to analytes of interest. The surrogates are used to determine the probable response of the group of analytes that are chemically related to the surrogate compound. Surrogates are added to the sample and carried through all stages of preparation and analyses.

TIC - Tentatively Identified Compound: Compounds detected in samples that are not target compounds, internal standards, system monitoring compounds, or surrogates.

The data package includes a summary of the analytic results of the quality control samples required by the SW-846 or CWA methods. The quality control samples include a method blank, a laboratory control sample, and the matrix spike/matrix spike duplicate analysis. If a target parameter is outside the method limits, every sample that is effected is flagged with the appropriate qualifier in Appendix B of the analytic report.

Method Blank - an aliquot of reagent water carried through the entire analytic process. The method blank results indicate if any possible contamination exposure during the sample handling, digestion or extraction process, and analysis. Concentrations of target analytes above the reporting limit in the method blank are qualified with the "B" qualifier.

Laboratory Control Sample - is a sample of known concentration that is carried through the digestion/extraction and analysis process. The percent recovery, expressed as a percentage of the theoretical concentration, has statistical control limits indicating that the analytic process is "in control". If a target analyte is outside the control limits for the laboratory control sample or any other control sample, the parameter is flagged with a "J4" qualifier for all effected samples.

Matrix Spike and Matrix Spike Duplicate - is two aliquots of an environmental sample that is spiked with known concentrations of target analytes. The percent recovery of the target analytes also has statistical control limits. If any recoveries that are outside the method control limits, the sample that was selected for matrix spike/matrix spike duplicate analysis is flagged with either a "J5" or a "J6". The relative percent difference (%RPD) between the matrix spike and the matrix spike duplicate recoveries is all calculated. If the RPD is above the method limit, the effected samples are flagged with a "J3" qualifier.
