Craig

Thanks for talking to me this morning. As noted below, all soils related to the leak in the 2" dump line to the ground tank have passed the COGCC Table 910-1 standards. As discussed Linn Energy proposes to install the double wall ground tank, replace any exposed 2" dump lines with new Schedule 80 2" pipe and bury impacted soils with 3' of non-impacted material from the excavation. We estimate we have enough material to complete the job without having to import any additional offsite soils. Let me know if this meets your expectations for closing this impacted site.

Thanks,

Derek Johnson
