#### COMMENTS:

Black Hills Plateau Production respectfully requets permission to use oil-based mud during the drilling of the curve and lateral portion of this well, after setting surface and intermediate casing with freshwater mud. The oil based mud with clay stabilizers will create hole stability through the wellbore?s curve allowing for single string completion. The best practices listed on the attached will be used for surface management of the fluid. Cuttings generated while using the oil based mud will be temporarily stored on location using cuttings boxes before being transported to a commercial solid waste disposal facility.
