Michael,

I have reviewed the referenced Form 2A Oil & Gas Location Assessment and have the following comments.

1) You have indicated that this proposed oil and gas location will have 16 wells, yet the Multi-Well Plan shows the wellbore trajectory and bottomhole location for only eight wells. Please revise the Multi-Well Plan to show all 16 oil and gas wells.

2) In the Cultural section you have indicated the distance to the nearest Above Ground Utility from the nearest well is 375 feet. However, a review of your Location Drawing indicates there is an overhead powerline 325 feet south of the nearest proposed oil and gas well (Line L1). Therefore, in the Cultural Distance section I would like to change the distance to the nearest Above Ground Utility from the nearest well to 325 feet.

Please respond to this correspondence by May 6, 2015. If you have any questions, please contact me. Thank you.

To: "Andrews - DNR, Doug" &lt;doug.andrews@state.co.us&gt;

I have attached a revised multi-well plan. The total number of wells and pump jacks needs to be revised to 15.

The 375' to OHP is based on the well used as the point of reference for the 2A which is the Razor 08E-1733 well stake which is also the same distance for the Razor 08E-1704 because it is located in the north row of wells on the Location Drawing.

Let me know if you need any other information.

Sincerely,

Michael L. Brown

Michael,

Line L1 in the Line Table on your Location Drawing indicates the wells proposed on the south row are 325 feet from an overhead power line. While the Reference Point well (Razor 08E-1733) on the north row may be 375 feet from that overhead power line, none of the wells on the north row are the closest wells to an above ground utility. For the Cultural section, we want the distances from the nearest well, whichever well that may be.
