Wildlife BMPs:

BMP Type	Comment
PROPOSED BMPs	<ul style="list-style-type: none"> • PDC shall endeavor to keep the well pad(s), the production facilities, and the pipeline and road easements free of weeds and debris, and to control erosion thereon. • At owner's request, PDC will fence its road easement with a single -strand fence to limit traffic to the easement. • Site preparation for the drilling or production tank battery area will be done with standard excavation equipment using native materials. If additional surface material (gravel) is needed it will be obtained from a commercial source or an approved borrow area. • All permanent structures (on -site for more than 6 months) constructed or installed will be required to be painted to blend with the surroundings or as directed by the private land owner. Facilities required to comply with OSHA will be excluded.

- A dike will be constructed around the tank battery, of sufficient capacity to contain at least 110 percent of the storage capacity of the largest tank within the dike. Also, per Exhibit A of the Surface Damage Agreement, the tank battery site will be fenced.
- Rehabilitation of unneeded, previously disturbed areas will consist of backfilling and contouring the reserve pit area, back sloping and contouring all cut and fill slopes. These areas will be re-seeded.
- The site will require periodic maintenance to ensure that drainages are kept open and free of debris, ice, and snow, and that surfaces are properly treated to reduce erosion, fugitive dust, and impacts to adjacent areas.
- No trash or debris will be disposed of in the reserve pit.
- Sewage will not be buried on location or put in the borehole. Sewage disposal facilities will be provided in accordance with State and local regulations at a site on the pad outside of drilling and/or production activity areas. Specifically, portable chemical toilets will be supplied and properly secured to the site to prevent possible upset. These portable chemical toilets will be regularly inspected and cleaned/replaced until they are removed from the site.
- The location will be kept clean and clear of all garbage, papers, unused/unneeded pipe and equipment. Garbage and other waste will be contained in either a portable trash cage, which will be totally enclosed with small mesh wire, or dumpsters. The garbage receptacle(s) will be located on the pad at a site outside of drilling and/or production activity areas. The contents of the receptacle(s) will be regularly transported to a Colorado Department of Public Health and Environment (CDPHE) approved Sanitary Landfill until completion of operations. All trash will be picked up if scattered and placed in a trash container as soon as practical.
- Upon release of the drilling rig, the rathole and mousehole will be filled. Excess equipment will be removed and the well site area will be cleaned and all refuse removed.
- At the end of the life of the well final reclamation activities would be conducted: All production areas would be recontoured and reclaimed, all interim reclaimed areas would be inspected and reclaimed again as appropriate.

Inspector Name: Rains, Bill

- All reclamation activities would be completed in accordance with the rules and regulations of the Colorado Oil & Gas Conservation Commission (COGCC), unless a variance is granted by the COGCC on the request of Wells Ranch.
- If any cultural resources are discovered during excavation activities, construction activities would cease immediately and the BLM would be notified so as to determine the significance of the discovery and appropriate mitigation measures are developed.
- Petroleum Development Corporation will inform all persons in the area who are associated with this project that they will be subject to prosecution for knowingly disturbing historic or archaeological sites, or for collecting artifacts.
- All hazardous substances and EHSs and commercial preparations will be handled in an appropriate manner to minimize the potential for leaks or spills to the environment.
