COMMENTS:

The soil under the liner will be sampled at the locations designated on the attached exhibit and analyzed to determine if the soils under the liner are contaminated. If contamination is found at elevated levels, then a new plan of remediation will be submitted to outline further testing to determine the extent of the contamination. The liner will be repaired where any leaks were detected by the survey or by visual observation when remediation is complete. Panel 15 on the North end will be replaced at the same time that other repairs are made.

H2S REPORTING

Data Fields in this section are intended to document Sample and Location Data associated with the collection of a Gas Sample that is submitted for Laboratory Analysis.

Gas Analysis Report must be attached.

H2S Concentration: _____ in ppm (parts per million) Date of Measurement or Sample Collection _____

Description of Sample Point:

Absolute Open Flow Potential _____ in CFPD (cubic feet per day)

Description of Release Potential and Duration (If flow is not open to the atmosphere, identify the duration in which the container or pipeline would likely be opened for servicing operations.):

Distance to nearest occupied residence, school, church, park, school bus stop, place of business, or other areas where the public could reasonably be expected to frequent: _____

Distance to nearest Federal, State, County, or municipal road or highway owned and principally maintained for public use: _____
