

## 605-01 (Rock Springs) 2014 Monitoring Summary

3/10/2015

1.0 Location:

OXY USA WTP LP (Operator # 66571)  
760 Horizon Dr., Ste. 101  
Grand Junction, CO 81506

605-01 (Location ID 323903)  
T6S, R97W, S5, SWNW  
Garfield County, Colorado

2.0 Overview:

This report summarizes the 2014 quarterly monitoring event for the release at OXY USA WTP LP's (OXY) Cascade Creek 605-01 well pad; refer to Colorado Oil and Gas Conservation Commission (COGCC) Document #200220428 and Remediation project #4622. The well pad is situated adjacent to an unnamed tributary of Crystal Creek. The release extended from the production pit to springs west of the pad (locally known as Rock Springs) which feeds the tributary. The well pad and the area upon which the release occurred and surfaced are located on property owned by OXY.

The 605-01 vicinity water sources have been monitored monthly or more frequent from June 2008 through October 2011 when water and access was available. Sampling frequency was modified to a quarterly sampling regime beginning in 2012.

Sampling Point #42 exceeded the maximum concentration level (MCL) for benzene (5.0 µg/L) during all quarterly sampling events. No other exceedances of the respective MCLs for benzene, toluene, ethylbenzene, or xylene (BTEX), or total dissolved solids (TDS) were identified during the 2014 sampling events.

3.0 Water Monitoring and Results:

Quarterly sampling events were conducted during 2014 on the following dates at sample locations 40, 42, 43, and 44:

- o March 25, 2014
- o May 22, 2014
- o August 27, 2014
- o October 21, 2014

Sampling was conducted at four of the approved sampling locations; North Spring (sampling point #40), South Spring (sampling point #42), Downstream (sampling point #43), and the Lower Pit (sampling point #44). The Upstream sample location (sampling point #41) was dry during all sample events in 2014.

A summary of analytical results during the last five quarters of the four sampling points are shown in Table 1. A summary by location for the history of the release are presented in the attached Comprehensive Laboratory Data Summary by Location table and attached to this report. Graphical summaries of BTEX concentrations for sampling locations 40, 42, 43, and 44 are summarized and attached to this report. The four sample locations and the historical upstream sample location are identified on the attached figure.

Table 1. Summary of 605-01 Monitoring Results from 4 <sup>th</sup> Quarter 2013 through 4 <sup>th</sup> Quarter 2014

Notes:

µg/L – micrograms per liter  
mg/L – milligrams per liter  
ppm – parts per million

\* – the highest number within the range is the MCL  
Q1/Q2/Q3/Q4 – indicates quarterly sample period

NA – not analyzed/measured

<sup>1</sup> – estimated value (result less than the reporting limit but greater than the laboratory method detection limit)

GRO – gasoline range organics

TDS – total dissolved solids

MCL – maximum concentration level (µg/L)

\*\* – 1.25 x 600 ppm (750 ppm) detected at location #41 on 6/24/2008

D – indicates duplicate sample analyzed by primary laboratory

S – indicates duplicate sample analyzed by secondary laboratory

**Bold** – indicates analyte exceeds COGCC Table 910-1 MCL

4.0 Quality Control:

A formal sampling and analyses plan has not been prepared for this event. OXY has collected duplicate samples, split samples, and a trip blank for quality control (QC) purposes to determine the adequacy of field and laboratory methods. Duplicate and split samples have been collected at sampling points #40, #42, #43 and #44 during 2014.

Duplicate samples collected at sample location #42 were within 0 to 28% of the quarterly sample results for benzene in 2014. Split samples for the same location were within 3 to 36% of the quarterly sample results for benzene in 2014. The second quarter 2014 split sample results for xylene and GRO at sample location #44 were detected by the laboratory, but at values less than the method reporting limit. All other QC samples collected at locations #40, #43, and #44 were “non detect”.

5.0 Conclusions:

2014 sample collection identified exceedances of the benzene standard at the South Spring (#42) location during the four 2014 quarterly sampling events. No other exceedances of BTEX constituents were identified during the 2014 sampling events. The COGCC has not established a numerical MCL for GRO; however, the GRO results are used as a comparative indicator for the presence of low-fraction petroleum hydrocarbons and of remediation progress. GRO was detected in the South Spring location during the four 2014 sampling events. The sample's GRO concentration was identified to be at low concentrations. All other analytes during the 2014 sampling events were below analytical detection limits.

Separate graphs of analytical results from the past year (five sampling events) and BTEX source graphs for the life of the remediation project are attached to this report. Analytical detection limits denoted with a less-than sign (<) in Table 1 are below allowable MCLs and appear to show an upward trend. Decreased laboratory sensitivity in analytical methods has been noted to contribute to the upward graphical trend, but is unlikely to be indicative of an increased trend of BTEX constituents at the sample locations during this reporting period.

Notes:

µg/L - micrograms per liter

mg/L - milligrams per liter

MCL - maximum contaminant level

GRO - gasoline range organics

TDS - total dissolved solids

ppm - parts per million

\*- the highest number within the range is the MCL

\*\* - 1.25 x background measurement from Upstream location on 6/24/08 (600 ppm)

D - indicates duplicate sample

S - indicates split sample

**Red** - indicates analytical result is above COGCC Table 910-1 MCL

Note S:

- EC - electroconductivity
- mmhos/cm - millimhos per centimeter
- TDS - total dissolved solids
- ppm - parts per million
- DO - dissolved oxygen
- mg/L - milligrams per liter
- ORP - Oxidation reduction potential
- mV - millivolts
- NA - Indicates field instrument malfunction
- Blank - Indicates no readings were taken
- D - Duplicate Sample
- S - Split Sample
- Red** - indicates parameter exceeds COGCC threshold value
