RE: Dilka Farms
Remediation Project #4296 / Facility #442091
NWNW Section 6 – T6N – R63W

Dear Mr. Axelson:

On May 16, 2008 Petroleum Development Corporation (a.k.a. PDC Energy, Inc.) submitted a Form 4 – Sundry Notice for the *Beneficial Reuse of E&P Waste* for the lining of a pond at subject site with water-based bentonitic drilling fluids. The Form 4 was approved on June 25, 2008 with certain Conditions of Approval (COAs) and assigned Remediation Project #4296.

Responses to COAs

COA #1 Only water-based bentonitic drilling fluids were applied to the pond in accordance with Rule 907.d.(3)B.i. (since revised).

COA #2 PDC and Mr. John Dilka (property owner now deceased) maintained an agreement for the beneficial reuse of E&P waste to line the pond at the subject site.

COA #3 Laboratory results of the soil samples collected on May 16, 2008 indicated Total Petroleum Hydrocarbons (TPH) below the then applicable Table 910-1. No subsequent conditions were encountered to indicate contaminant concentrations exceeded the TPH standards for sensitive areas.

COA #4 Between December 4, 2006 and April 18, 2008, approximately 4,250 cubic yards of water-based bentonitic drilling fluids were transported to the subject site in order to line the pond. Copies of the individual well agreements are attached as well as a tabulation providing the well name, API #, well location, dates of the E&P waste transfers to the subject site, and approximate volumes from each well.

COA #5 Soil sample results from the closure of the reserve pit at each individual well location are available upon request.

COA #6 PDC discontinued the beneficial reuse of E&P waste at the Dilka Farms property in April 2008.

Based on the information provided, PDC requests that Remediation #4296 and Facility #442091 be closed and that No Further Action is required.

Should you have any questions or concerns, please call me at 303-831-3904.

Sincerely,

Randall Ferguson
EHS Senior Compliance Specialist
