**COMMENTS:**

This form is being submitted to document onsite burial of drill cuttings during pit closure efforts completed August 8, 2011 on the G35 496 well pad (335904). This form is also being submitted to document the transfer of drill cuttings from the M23 496 (335680) and H34 496 (335941) for burial in the pit excavation on the G35 496 well pad. This transfer occurred entirely on Encana owned surface and access roads, and was carried out in support of field-wide interim reclamation efforts on locations acquired from another operator in 2010.

After the acquisition, representative composite samples of drill cuttings stockpiles were collected and submitted to a laboratory for analysis of COGCC Table 910-1 constituents of concern. Upon receipt of laboratory results indicating compliance with 900 Series Rules, the drill cuttings status was communicated to construction and operations personnel for reclamation scheduling.

During pit closure efforts (previously documented in Form 4 #: 400808529), an additional 600 cubic yards of drill cuttings from the M23 and H34 were buried in the pit excavation. The cuttings were placed and oriented to maximize the depth of the cap of native material, and to assure that the stockpile remained below the agronomic zone during future reoccupations or final reclamation. To assure successful revegetation during reclamation, a minimum of three feet of native material is used to cap all impacted and potentially impacted material.

The inorganic constituents EC, SAR, and pH were above the allowable limits, but the cuttings stockpile was buried below the agronomic zone where these constituents should have no effect on revegetation efforts. Encana requests that the COGCC consider the reclamation purpose of listing the inorganic constituents and the physical disposition of these materials as an alternative to the allowable levels listed in COGCC Table 910-1.

The metal constituent arsenic is also above the allowable limit, but is within the range of background values for this area. Based on these results and Footnote 1 to COGCC Table 910-1, Encana requests that the COGCC consider the higher range of background arsenic values as the allowable concentration for this constituent.

Laboratory results are provided in the attached summary table and laboratory report.
