Waste Management Plan

Lamke 33-6-29 #1
SESE Sec 29 T33N R5W
Archuleta County, Colorado

The following steps will be taken to ensure compliance with Rule 907a:

Drill Cuttings:

A pitless "closed loop" drilling system will be used. Cuttings will be segregated from drilling fluid and collected into steel containment bin(s). They will then be transferred into steel containers and taken to one of the commercial disposal facilities found in the table on page 2.

Drilling Fluids:

Drilling fluids will be contained onsite in a series of steel tanks. At the conclusion of drilling the fluid will be transported off the location to one of the commercial disposal facilities found in the table on page 2.

Frac Flowback:

Frac flowback fluids will be stored onsite in temporary steel frac tanks. Fluids will be transported offsite and be disposed of in one of the commercial disposal facilities found in the table on page 2.

Produced Water:

Produced water will be segregated at the separator assembly. It will then be diverted to onsite steel tanks with 110% secondary containment and transported off location to one of the commercial disposal facilities found in the table on page 2.

Facility Name	Drill Cuttings and Solid Waste	Unused and Spent Drilling Fluids and Cement returns	Completion and Flowback Fluids	Produced Water	Garbage & Trash	Under-ground Well Injection	Land Farm	Evaporation Pit	Land Fill Burial
