Describe what is known about the spill/release event (what happened -- including how it was stopped, contained, and recovered):

The leak occurred in a right of way adjacent to La Plata County Road 303. The water flowed from the ROW into an unirrigated pasture that contained two cattle at the time of the release. The produced water flowed from the point of release across the pasture into a shallow natural depression within the pasture that has the ability to convey water. The spill was stopped by shutting in the line that leaked and depressuring the pipeline. Samples of the produced water were taken at the time of discovery to characterize the release. Cattle in the pasture were removed by the Landowner to remove any potential threat to the cattle. A plan for site soil sampling was discussed with Inspector Hughes during the site visit.
