

Photo 1. View of approximately 6-foot-tall musk thistle plant on the edge of the working area. This plant may have been chemically treated but numerous flowerheads capable of dispersing thousands of seeds are still present.

Photo 2. View of Canada thistle (*Cirsium vulgare*) plants growing within the northern portion of the project area where there is sparse vegetation on the well pad perimeter berms.

Photo 3. View of Canada thistle plants that may have been treated but are still alive within the southern portion of the project area.

Photo 4. View of non-weedy pasture south of project area.
