SPILL/RELEASE REPORT (SUPPLEMENTAL)

This form is to be submitted by the party responsible for the oil and gas spill or release. Any spill or release which may impact waters of the State must be reported as soon as practicable; any spill over 20 bbls must be reported within 24 hours and all spills over five bbls must be reported within ten days. Submit a Site Investigation and Remediation Workplan (Form 27) when requested by the Director.

Describe what is known about the spill/release event (what happened -- including how it was stopped, contained, and recovered):

The leak occurred in a right of way adjacent to La Plata County Road 303. The water flowed from the ROW into an unirrigated pasture that contained two cattle at the time of the release. The produced water flowed from the point of release across the pasture into a shallow natural depression within the pasture that has the ability to convey water. The spill was stopped by shutting in the line that leaked and depressuring the pipeline. Samples of the produced water were taken at the time of discovery to characterize the release. Cattle in the pasture were removed by the Landowner to remove any potential threat to the cattle. A plan for site soil sampling was discussed with Inspector Hughes during the site visit.

Depth of Impact (feet BGS): _____		Depth of Impact (inches BGS): <u>8</u>	
How was extent determined?			
Measurements of the soil that was wet with produced water were taken with a rolling foot-wheel to determine the extent of the release. Estimates of depth of penetration of produced water into soil were made by excavating a small area of soil to look for signs of saturation of water in soil.			
Soil/Geology Description:			
The point of release was a steel produced water flow line that is buried in the shoulder of County Road 303. The water flowed from the ROW into an unirrigated pasture. The pasture slopes gently from the northwest to the south east. Soils in the pasture are a clay-loam. Vegetation is primarily pasture grasses. The produced water entered a shallow wet feature in the low area of the pasture that was flowing water at the time of the release. This feature does not contain a bed, back or ordinary high-water mark. The water feature in the pasture is labeled as an intermittent stream by the National Hydrological Database.

Cause of Spill (Check all that apply) <input type="checkbox"/> Human Error <input checked="" type="checkbox"/> Equipment Failure <input type="checkbox"/> Historical-Unknown <input type="checkbox"/> Other (specify) _____	
Describe Incident & Root Cause (include specific equipment and point of failure) <div>The line that failed and caused the leak to occur is currently being excavated. An analysis of the failure mechanism will be performed once the line is excavated and the damaged section of pipe is removed. Soil samples of the effected area were taken on 9/2/2015. Results from those soil samples have not been recieved. Plans for remediation of the impacted area will be guided by the analytical results of those soil samples. A Form 27 will be submitted for this event on or before September 25th.</div>
