Describe what is known about the spill/release event (what happened -- including how it was stopped, contained, and recovered):

During pit closure activities, a contractor was removing sludge from the pit, utilizing a hydro vac. The contractor opened a valve on the back of the truck to hook up a hose when the load started to spill out. He immediately tried to close the valve but couldn't because a rock had blocked it. Approximately 3 bbls of pit bottom sludge was spilled on location. The spill did not leave the location.
