As defined in COGCC 100-Series Rules

Describe what is known about the spill/release event (what happened -- including how it was stopped, contained, and recovered):

WPX employee didn't open a valve on the gun barrel after completing a routine maintenance. That resulted in condensate flowing to the combustor. The condensate caught on fire and less than 1 bbl of condensate impacted soil immediately adjacent to the combustor. The Fire Department was called and attempted to put out the fire with water which mixed with the small volume of condensate and ran off the location ~ 250'. WPX would like to ask for COGCC's permission to analyze the confirmation samples for an abbreviated list of Table 910-1 analytes. The samples would be analyzed for TPH, BTEX, and PAHs. The samples would not be analyzed for metals and inorganics.

Agency	Per discussion with COGCC, collect representative soil samples from impacted area and conduct rush analyses for abbreviated list of Table 910-1 analytes including TPH, BTEX, and PAHs. If any samples exceed Table 910-1 standards, assess potential for any impact to waters of the state. If potential exists for impact, take immediate steps to mitigate and notify CDPHE and COGCC. Remediate to Table 910-1 standards and provide documentation in a either a Supplemental F-19 if cleaned up immediately or F-27 if extended remediation is required.	10/15/2015 2:47:13 PM
