Roscoe,

Thank you for sending the lab report. The Form 27 indicated that a groundwater gradient/flow direction diagram would be submitted for each sampling event. Generally we would get a very basic summary report with a description of the sampling event including a table with groundwater level measurements, a table summarizing the analytical results and the potentiometric surface map. If you could provide that basic information as one report including the lab report for the future submittals I believe that would better meet the documentation described in the Form 27 & condition of approval.

Thank you,  
John

John – Attached are the groundwater monitoring results for September 2015 from the Pierce Central Battery as part of Rem #9093. There were no liquid hydrocarbons or BTEX detected in the samples collected from the three monitoring wells. Thanks. Roscoe
