Kyle,

COGCC has reviewed the Subsurface Investigation dated October 11, 2012, the Pit Closure Report dated October 22, 2013, and the Landfarm Closure Report dated August 12, 2015 for the closure of one tinhorn pit located at the Terrace Compressor Station which is located on County Road 118, approximately 800 feet west of the Terrace Gas Plant.

On December 24, 2015 COGCC denied a request for No Further Action because concentrations of benzene, TPH-DRO, TPH-GRO and benzo-(a)pyrene in soil left in place were above the Table 910-1 Concentration Levels for those parameters. As COGCC and Whiting have recently discussed, Whiting is evaluating options for defining the extent of remaining impacts in soil at this location. Whiting is also evaluating options for the remediation of impacts to soil and will submit a revised Site Investigation and Remediation Workplan to COGCC for review.

Remediation Project #7392 remains unresolved in COGIS and will remain unresolved until a No Further Action determination can be granted. Pit Facility ID 100035 will remain active in COGIS until all remediation related to the pit/tinhorn is complete and final reclamation commences.

Please provide a timeframe for further investigation and remediation of the impacts associated with the former pit.

Please contact me with any questions regarding this project.

Regards,

Rick Allison, P.G.
