

Photo 1. View of dry hole marker from well head facing southward. Vegetation is largely Russian thistle (*Salsola tragus*). A few rubber rabbitbrush (*Chrysothamnus nauseosus*) plants that appear to be volunteers are also present.

Photo 2. View of project area from southwestern corner facing center. Producing well pad for 067-07243 is adjacent to the project area.

Photo 3. View of western portion of project area from southwestern corner facing northward.

Photo 4. Typical birdseye view of vegetation within the project area, being comprised mainly of weeds such as Russian thistle, bindweed (*Convolvulus arvensis*), and knotweed (*Polygonum arenastrum*).

Photo 5. View of vegetation transect within the project area (Transect 1) from mid-point facing northward.

Photo 6. View of reference area transect outside of the project area (Transect 2) from the beginning of the transect facing southward.

Photo 7. Birdseye view of vegetation within the reference area transect. Vegetation that can be seen here is comprised of purple three-awn (*Aristida purpurea*) and alyssum (*Alyssum simplex*), and bindweed.
