To: Susana Lara-Mesa <slaramesa@kpk.com>

Susie,

The above referenced Form 27 has been approved with the following conditions:

1. Attached is a copy of the Location Drawing that you provided with soil sampling locations. COGCC has added an area of stressed vegetation that should be investigated by soil sampling for pH, EC and SAR at a minimum. Additional soil fertility sampling may be beneficial in preparing a seedbed for adequate reclamation.
2. The five (5) soil sample locations that are outlined with a box (pit sidewalls and center) shall be cored and the lithology logged in order to identify the depth of the former pit and to document that the pit was adequately remediated prior to backfilling and closure. A minimum of one soil sample from each of these locations shall be collected and analyzed for BTEX and TPH. Collect one soil sample from the center of the former oil skim pit in the same manner as previously described.
3. Provide a brief report of the sampling activities and results including sample location drawing showing, analytical data table comparing results to Table 910-1 allowable concentrations, photographs and laboratory data report.

Please reference remediation #9363 on all future correspondence regarding this project.

Please call me if you have any questions or need additional information.

Thank you,

Robert J. Young
