

Photo 1. View of vegetation within “teardrop” on working surface of well pad. Gray vegetation is kochia (*Kochia scoparia*) debris that needs to be removed. Green and yellow vegetation is desirable grasses that should not be removed.

Photo 2. View of musk thistles (*Carduus nutans*) growing within the interim reclamation area.

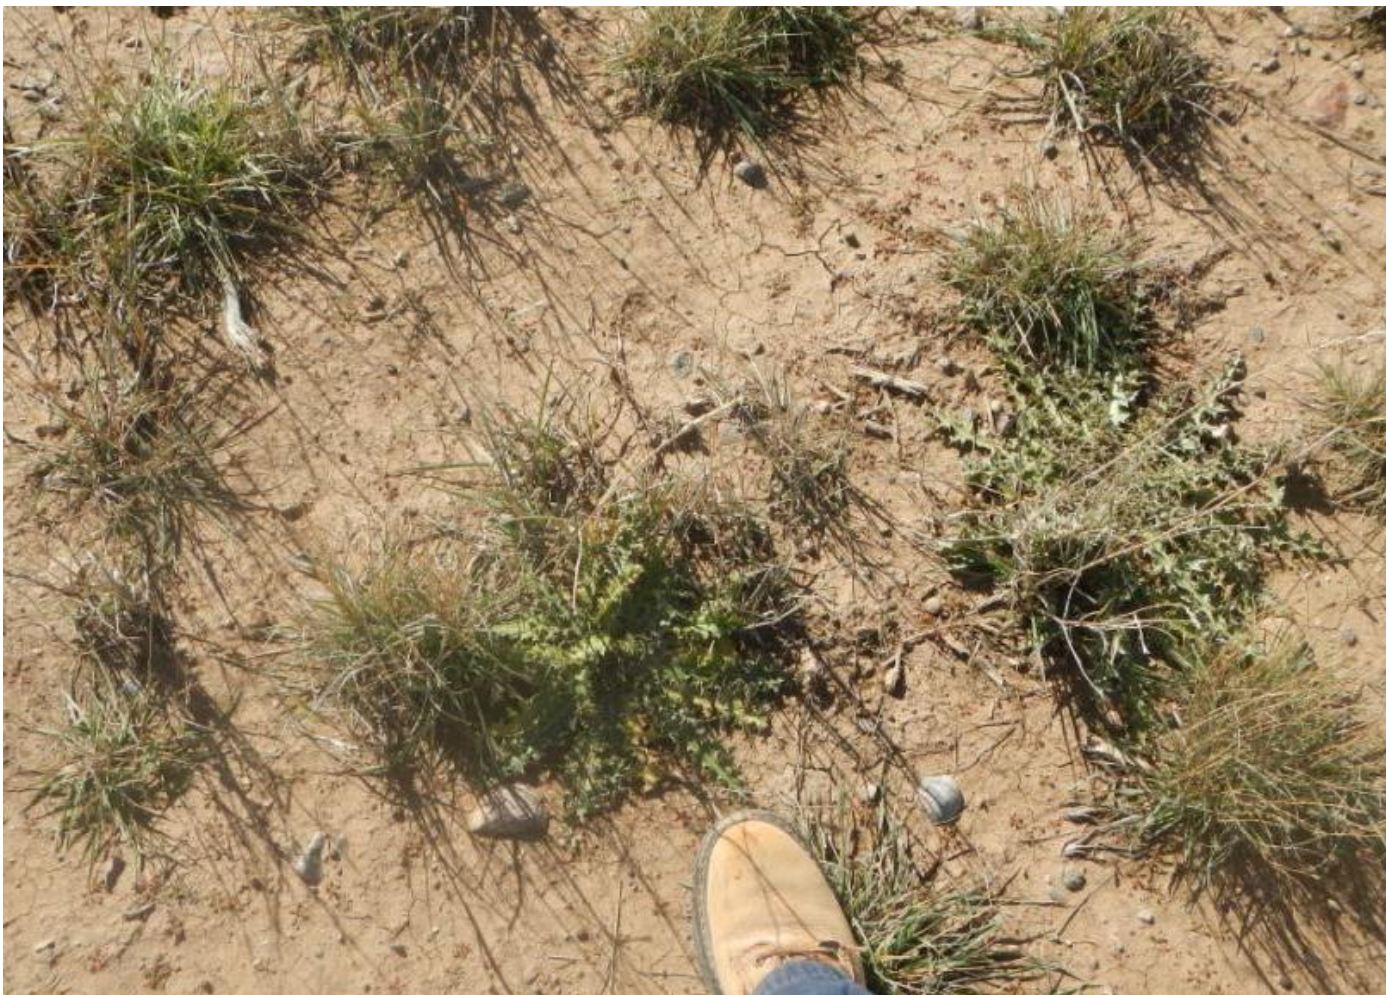

Photo 3. Another view of musk thistles within the interim reclamation area.

Photo 4. View of project area from southwestern corner facing center. Revegetation is largely comprised of grasses such as western wheatgrass (*Pascopyron smithii*), crested wheatgrass (*Agropyron cristatum*), and intermediate wheatgrass (*Thinopyron intermedium*).

Photo 5. View of southern portion of project area from southwestern corner facing eastward.
