

Photo 1. View of project area from southwestern corner facing center. Revegetation in this portion is comprised of smooth brome (*Bromus inermis*), western wheatgrass (*Pascopyron smithii*), and dropseed (*Sporobolus* sp.).

Photo 2. View of Canada thistles (*Cirsium arvense*) growing within the western portion of interim reclamation area.

Photo 3. View of southwestern portion of the project area from mid-western edge facing southward. Weeds such as musk thistle (*Carduus nutans*), kochia (*Kochia scoparia*), and cheatgrass (*Bromus tectorum*) are growing here.

Photo 4. View of musk thistle rosettes within the western portion of the interim reclamation area.

Photo 5. View of rig anchor cable within the project area.

Photo 6. View of eastern portion of the project area from southeastern corner facing northward. A planted alfalfa (*Medicago sativa*) field grows east of the project area and in the foreground.
