David,

COGCC has reviewed the submittals for the above referenced project and based on the information provided it appears that no further action is required for the oil skim pit closure. However, should future conditions at the site indicate contaminant concentrations in soils exceeding COGCC standards or if ground water is found to be significantly impacted, then further investigation and/or remediation activities may be required at the site.

Remediation Project #8696 has been changed to resolved status in the Colorado Oil & Gas Information System.

Thank you,

Robert J. Young
