Subject: Stromberger 22-E (Doc ID 400774299)

To: "john.noto@state.co.us" <john.noto@state.co.us>

John,

As we discussed on the phone today we propose to use an engineered containment system around the tank battery consisting of a perimeter of metal walls that are post driven into the ground around a flexible geotextile base and sprayed with a polyurea liner to coat the inside of the containment area. The proposed system is equivalent to the requirements of Rules 603.h(2).C and 603.h(1).C which require containment berms around all tanks to be constructed of steel rings or another engineered technology and use of a synthetic or geosynthetic liner that is mechanically connected to the steel ring or another engineered technology.

Please let me know if you have any other question.

Thanks,

Erin
