Katrina,

I have attached anti-collision reports for each well from which the "*distance from completed portion of proposed wellbore to nearest completed portion of offset wellbore permitted or completed in the same formation*" has been determined in a 3D distance.

Please include the following comment on all Form 2s:

The distance from completed portion of proposed wellbore to nearest completed portion of offset wellbore permitted or completed in the same formation has been measured accounting for three dimensions instead of a plan view due to the significant difference in depths which allows the wellbores to be in compliance with the spacing order.

"*distance from proposed wellbore to nearest existing or permitted wellbore belonging to another operator*" are corrected as below:

Razor 250-2410 1212'  
Razor 250-2411 1265'  
Razor 250-2412 1264'  
Razor 250-2443 1253'  
Razor 250-2444 1223'

If you have any questions, please call.

Sincerely,  
Michael L. Brown  
307-237-9310
