Phil, attached is the approved form 27. The remediation project has also been closed. Spill 444328 is open in the data base. Please submit a supplemental form 19 with request for closure based on project 9412.

Based on review of information presented it appears that no further action is necessary at this time. However, should future conditions at the site indicate contaminant concentrations in soils exceeding COGCC standards or if ground water is found to be significantly impacted, further investigation and/or remediation activities may be required at the site.
