Describe what is known about the spill/release event (what happened -- including how it was stopped, contained, and recovered):

On the morning of 12/31/2015 a leak was discovered on a produced water line at the Simba 1-06 SWD. The leak was caused by a dial gauge that had frozen, rupturing the Bourden tube. Approximately 96 bbls of produced water were spilled on location, outside of secondary containment. Approximately 3 bbls of produced water ran off of EOG's location in a narrow trickle down a shallow draw approximately 25 yards to the northwest of the edge of the location. The ground off location was frozen and covered with snow, and the produced water ran under the snow. The spill does not threaten any surface water. The broken gauge was replaced with a plug to prevent further leaks. Initial notification to Weld County and the surface owner will be attempted to be made on the morning of 1/1/2016, in accordance with COGCC Rule 906.b.(2) and Rule 906.b.(3), respectively.
