# 1. Introduction

GHD Services, Inc. (GHD), formerly Conestoga-Rovers and Associates, Inc., prepared this *Second Semiannual 2015 Groundwater Monitoring Report* on behalf of CM Production LLC for the Margaret Spaulding Treatment Site.

GHD conducted semiannual groundwater monitoring and sampling activities on November 18, 2015 at the Margaret Spaulding Water Treatment Facility (Site), SW ¼ SE ¼ Section 28, T9N, R81W, Jackson County, Colorado, which is located on the Lone Pine Ranch off of County Road 12W (Figure 1). This report summarizes:

- Background and site characteristics
- Semiannual groundwater monitoring activities
- Analytical results
- Planned site activities

## 1.1 Site Background and Characteristics

The Margaret Spaulding Water Treatment Facility, operated by CM Production LLC, includes aboveground storage tanks, various aboveground and underground piping, a truck loading rack, and six pits (Figure 2). Site investigation activities were initiated in April 2012, by the previous owner (Lone Pine Gas, Inc.). In July 2015, GHD was retained as the environmental consultant for the Site by CM Production LLC.

A total of six groundwater monitoring wells were installed at the Site during site characterization activities in 2013. Semiannual groundwater monitoring and sampling are currently being conducted at the Site.

The Colorado Department of Public Health and Environment – Water Quality Control Division (CDPHE-WQCD) required CM Production LLC to cease the produced water discharge to Spring Gulch (Permit # CO0048712) on October 31, 2013 pursuant to the June 25, 2013 Compliance Order on Consent, Number IC-130624.

Remediation activities that have been conducted at the Site have included soil treatment of the stockpiled soil removed from the former Overflow Treater Pit (Facility ID# 115241), the decommissioning of pits and groundwater monitoring.

## 1.2 Regulatory Framework

The standards for the cleanup of the petroleum hydrocarbon impacts associated with the Site and enforced water quality standards and pit closure standards are based on Colorado Oil and Gas Conservation Commission (COGCC) Table 910-1. Sampling activities were conducted in accordance with COGCC guidance.

## 2. Groundwater Sampling

GHD conducted groundwater monitoring at the Site on November 18, 2015. GHD measured fluid levels in the six (6) on-site monitoring wells prior to the collection of water quality samples. Groundwater elevations ranged from 8203.50 feet-above mean sea level (ft-amsl) at MW-1 to 8206.48 ft-amsl at MW-6. The depth below ground averaged 28.69 ft-below ground surface (bgs). Groundwater flows to the north/northwest with a gradient of approximately 0.0057 feet per foot (ft/ft). For the November 2015 groundwater monitoring, the Groundwater Surface Map is presented as Figure 3, Groundwater levels are presented in Table 1, and Historical Groundwater Elevation Data is summarized in Appendix A.

Groundwater samples were collected from all of the Site's monitoring wells and included wells MW-1, MW-2, MW-3, MW-4, MW-5, and MW-6. Prior to gauging, each monitoring well was opened and the cap was removed to allow groundwater levels to stabilize and equilibrate. Samples were collected following the removal of stagnant water with a disposable bailer. The groundwater samples were collected using clean, disposable bailers, decanted into clean laboratory-provided containers, and placed on ice in an insulated cooler. The coolers were delivered to ESC Laboratories in Lakewood, Colorado under chain-of-custody protocols.

Accutest analyzed the groundwater samples for:

- Benzene, toluene, ethylbenzene, and total xylenes (BTEX) by EPA Method 8260B
- Total Petroleum Hydrocarbons – Gasoline Range Organics (TPH-GRO) by EPA Method 8260B
- Total Petroleum Hydrocarbons – Diesel Range Organics (TPH-DRO) by EPA Method 8015B
- TDS by SM 2540C
- Chloride and Sulfate by EPA Method 300

## 3. Analytical Results

Sample results for the Site are summarized as follows:

- BTEX constituents were not detected above the groundwater COGCC Table 910-1 levels during the November 2015 monitoring and sampling event
- TPH-GRO was not detected above the laboratory detection limit in any monitoring wells
- TPH-DRO was detected above the lower laboratory detection limit in monitoring wells MW-1 (1.55 mg/L), MW-2 (0.267 mg/L), MW-4 (0.329), MW-5 (0.502 mg/L), and MW-6 (0.146 mg/L)
- Chloride and sulfate were detected above the lower laboratory detection limits in all monitoring wells, but were below the CDPHE-WQCC Regulation #41 standard of 250 mg/L
- TDS ranged from 55 mg/L in MW-2 to 351 mg/L in MW-1, which are below the CDPHE-WQCC Regulation #41 standard range of 0 to 400 mg/L.

Groundwater analytical data are summarized in Table 2 and historical groundwater analytical data is summarized in Appendix B. The laboratory report is presented in Appendix C. Groundwater analytical results are shown on Figure 4.

## 4. Conclusions

The groundwater analytical results for this sampling period showed all hydrocarbon constituents are below applicable COGCC Table 910-1 standards as previously observed for this Site.

The next semiannual groundwater sampling event will be conducted in May 2016.

## 5. Future Site Activities

The Pits, not including the currently excavated pit, will be sampled for baseline soil analytical results including BTEX, TPH-GRO, TPH-DRO TPH-ORO, inorganics and metals in order to choose the best remedial process for pit closures.

Expansion of the landfarm area, to include scheduled aeration and spreading of the current stockpiles will begin in the spring.

The first semiannual groundwater sampling event will be conducted in May 2016.

Regular e-Sundry forms will be submitted to the COGCC to be sure communication of remediation progress is available.

All of Which is Respectfully Submitted,

GHD Services Inc.

All sample aliquots were received at the correct temperature, in the proper containers, with the appropriate preservatives, and within method specified holding times. All MDL (LOD) and RDL (LOQ) values reported for environmental samples have been corrected for the dilution factor used in the analysis. All Method and Batch Quality Control are within established criteria except where addressed in this case narrative, a non-conformance form or properly qualified within the sample results. By my digital signature below, I affirm to the best of my knowledge, all problems/anomalies observed by the laboratory as having the potential to affect the quality of the data have been identified by the laboratory, and no information or data have been knowingly withheld that would affect the quality of the data.

Abbreviations and Definitions

SDG	Sample Delivery Group.
MDL	Method Detection Limit.
RDL	Reported Detection Limit.
ND,U	Not detected at the Reporting Limit (or MDL where applicable).
RPD	Relative Percent Difference.
(dry)	Results are reported based on the dry weight of the sample. [this will only be present on a dry report basis for soils].
Original Sample	The non-spiked sample in the prep batch used to determine the Relative Percent Difference (RPD) from a quality control sample. The Original Sample may not be included within the reported SDG.
(S)	Surrogate (Surrogate Standard) - Analytes added to every blank, sample, Laboratory Control Sample/Duplicate and Matrix Spike/Duplicate; used to evaluate analytical efficiency by measuring recovery. Surrogates are not expected to be detected in all environmental media.
Rec.	Recovery.
SDL	Sample Detection Limit.
MQL	Method Quantitation Limit.
Unadj. MQL	Unadjusted Method Quantitation Limit.

Qualifier	Description
J1	Surrogate recovery limits have been exceeded; values are outside upper control limits.
J3	The associated batch QC was outside the established quality control range for precision.
V	The sample concentration is too high to evaluate accurate spike recoveries.

ESC Lab Sciences is the only environmental laboratory accredited/certified to support your work nationwide from one location. One phone call, one point of contact, one laboratory. No other lab is as accessible or prepared to handle your needs throughout the country. Our capacity and capability from our single location laboratory is comparable to the collective totals of the network laboratories in our industry. The most significant benefit to our "one location" design is the design of our laboratory campus. The model is conducive to accelerated productivity, decreasing turn-around time, and preventing cross contamination, thus protecting sample integrity. Our focus on premium quality and prompt service allows us to be **YOUR LAB OF CHOICE**.

## Our Locations

ESC Lab Sciences has sixty-four client support centers that provide sample pickup and/or the delivery of sampling supplies. If you would like assistance from one of our support offices, please contact our main office. **ESC Lab Sciences performs all testing at our central laboratory.**
