As defined in COGCC 100-Series Rules

Describe what is known about the spill/release event (what happened -- including how it was stopped, contained, and recovered):

At the HSR-Rademacher 63N67W/30SESW location, an operator discovered a release from an oil bypass line due to a corrosion hole. An unknown volume of oil was released into the subsurface. During excavation activities, groundwater was encountered in the excavation at approximately 4 feet below ground surface. One excavation groundwater sample (GW01) was collected and submitted for laboratory analysis of BTEX. Laboratory analytical results received on January 15, 2016 indicated that benzene exceeded the CGWQS at 87.1 µg/L. Excavation soil and groundwater analytical results will be summarized in a supplemental report. A topographic Site Location Map showing the general location of the release is provided as Figure 1.
