Phil

attached is the approved site investigation and remediation plan by which the spill (444185) was closed. Based on review of information presented it appears that no further action beyond those addressed in the approved site investigation and remediation plan is necessary at this time. However, should future conditions at the site indicate contaminant concentrations in soils exceeding COGCC standards or if ground water is found to be significantly impacted, further investigation and/or remediation activities may be required at the site.
