Inspector Comment:

Follow-up to Spill#444447. The release was caused by a failure of a buried produced water dump line. Discovery of the release occurred when produced water from the line migrated to the surface and soaked into soil adjacent to the produced water tank. The cause of the line failure was internal corrosion. The line was pressure tested on 12/11/15 and passed the test. The compromised line was excavated for repair. Soil impacted by this release and the bottom of the excavation was sampled for analytes listed in the COGCC Table 910-1. Excavation was open at time of site inspection. 40 bbl tank has been removed. Line has been replaced above ground with heat trace freeze protection. ~ 10-15 cy of presumably contaminated soil is stockpiled within a 30X15 ft dirt berm at NE of pad.

Spills/Releases:

Type of Spill: WATER Description: dump line leak Estimated Spill Volume: _____

Comment: _____

Inspector Name: Spencer, Stan

Follow-up to Spill#444447. The release was caused by a failure of a buried produced water dump line. Discovery of the release occurred when produced water from the line migrated to the surface and soaked into soil adjacent to the produced water tank. The cause of the line failure was internal corrosion. The line was pressure tested on 12/11/15 and passed the test. The compromised line was excavated for repair. Soil impacted by this release and the bottom of the excavation was sampled for analytes listed in the COGCC Table 910-1. Location is ~ 500ft north of river but 15 ft high railroad bed to south of location prevents a direct runoff pathway. Excavation was open at time of site inspection. 40 bbl tank has been removed. Line has been replaced above ground with heat trace freeze protection. ~ 10-15 cy of presumably contaminated soil is stockpiled within a 30X15 ft dirt berm at NE of pad.

Corrective Action: Per F-19 COA: Assess nature and extent of contamination. Remediate to Table 910-1
