Sydney,

I have reviewed the Supplemental Spill Report and laboratory data submitted for the release at the Fort Collins Tank Battery. Unfortunately, the sample contained TEPH at a concentration of 551 mg/kg, which exceeds the Table 910-1 Concentration Level of 500 mg/kg for TPH.

Therefore, this release cannot be closed without further investigation and remediation. Prospect will need to define the extent of impact greater than the Table 910-1 Concentration Level and remove or properly remediate any material that exceeds the Table 910-1 Concentration Levels.

I will remove the request for closure and pass the form, but the spill will remain open until the additional actions above have been completed and reported.

Please contact me with any questions.  
Rick
