Subject: Croissant 2 (05-123-11772): Casing Leak Found

Good afternoon,

I wanted to let you all know that APC found a casing leak on the Croissant 2. This well has a rig on it for a wellhead replacement. During pressure test of wellhead we found a leak. The casing leak has been narrowed down between 5586'-5591'. We will be pumping cement to repair this leak. I wanted to see if I can get a verbal from the COGCC to proceed forward. The cement info is below:

- Set CICR @ 5536'
- Pump 85 sx of 15.8 ppg, 1.15 yld cement
- Estimated TOC ~ 5391'
