SPILL/RELEASE REPORT (SUPPLEMENTAL)

This form is to be submitted by the party responsible for the oil and gas spill or release. Any spill or release which may impact waters of the State must be reported as soon as practicable; any spill over 20 bbls must be reported within 24 hours and all spills over five bbls must be reported within ten days. Submit a Site Investigation and Remediation Workplan (Form 27) when requested by the Director.

Check if impacted or threatened by spill/Release (please answer Yes/No to all that apply):

Waters of the State ☒ Residence/Occupied Structure ☐ Livestock ☐ Public Byway ☐ Surface Water Supply Area ☐

As defined in COGCC 100-Series Rules

Describe what is known about the spill/release event (what happened -- including how it was stopped, contained, and recovered):

A release occurred at the Gee 15C-25HZ well head during workover operations. Oil, condensate, and produced water released from the well head and misted onto the ground surface, two isolated gravel quarry ponds, and a wetland fringe area along a dry drainage. The volume of the release is still being investigated. Excavation and cleanup activities are ongoing at the site. Confirmation soil samples will be collected from the excavation and will be submitted for laboratory analysis of TPH, BTEX, pH, EC, and SAR (if applicable). Surface water samples will be collected from the two ponds for laboratory analysis of BTEX. The analytical results and excavation details will be provided in a supplemental report. A topographic Site Location Map of the general release area is provided as Figure 1.

Additional Spill Details Not Provided Above:

No further action is required. Laboratory analytical results for the confirmation soil samples indicated that TPH, BTEX, pH, and EC levels are in compliance with COGCC Table 910-1 allowable levels at the extent of the spray release affected areas. In addition, laboratory analytical results for the surface water samples indicated BTEX concentrations were less than the laboratory reporting limit in all the surface water samples collected. Based on the confirmation soil and surface water sample analytical results, Kerr-McGee is requesting an NFA status for this site.

CORRECTIVE ACTIONS

#1 Supplemental Report Date: 03/08/2016

Cause of Spill (Check all that apply) ☒ Human Error ☐ Equipment Failure ☐ Historical-Unknown
☐ Other (specify) _____

Describe Incident & Root Cause (include specific equipment and point of failure)

A release occurred at the Gee 15C-25HZ wellhead due to improper placement of equipment during workover rig operations. Approximately 60 barrels of oil, condensate, and produced water released from the wellhead and misted over an area that included two connected gravel quarry ponds.

Describe measures taken to prevent the problem(s) from reoccurring:

The affected equipment will be upgraded and a new process will be implemented to prevent improper equipment placement.

Volume of Soil Excavated (cubic yards): 510

Disposition of Excavated Soil (attach documentation) ☒ Offsite Disposal ☐ Onsite Treatment
☐ Other (specify) _____

Volume of Impacted Ground Water Removed (bbls): 0

Volume of Impacted Surface Water Removed (bbls): 0

REQUEST FOR CLOSURE

Spill/Release Reports should be closed when impacts have been remediated or when further investigation and corrective actions will take place under an approved Form 27.

Basis for Closure: ☒ Corrective Actions Completed (documentation attached)

☐ Work proceeding under an approved Form 27

Form 27 Remediation Project No: _____

OPERATOR COMMENTS:

I hereby certify all statements made in this form are to the best of my knowledge true, correct, and complete.

Description

Based on review of information presented it appears that no further action is necessary at this time. However, should future conditions at the site indicate contaminant concentrations in soils exceeding COGCC standards or if ground water is found to be significantly impacted, further investigation and/or remediation activities may be required at the site.
