**SPILL/RELEASE REPORT (INITIAL /w SUPPLEMENTAL)**

This form is to be submitted by the party responsible for the oil and gas spill or release. Any spill or release which may impact waters of the State must be reported as soon as practicable; any spill over 20 bbls must be reported within 24 hours and all spills over five bbls must be reported within ten days. Submit a Site Investigation and Remediation Workplan (Form 27) when requested by the Director.

Describe what is known about the spill/release event (what happened -- including how it was stopped, contained, and recovered):

At the Barclay-63N66W/27NWNW tank battery, an operator discovered surface soil staining within the bermed tank battery. The cause of the release is still under investigation. The volume of the release is unknown. The excavation soil sampling details and analytical results are summarized in the supplemental report. A topographic Site Location Map showing the geographic setting of the release is provided as Figure 1.

How was extent determined?

On March 2, 2015, six sidewall soil samples (N01@4', N02@4', E01@4', S01@4', S02@4', and W01@4') and two base soil samples (B01@7' and B02@7') were collected from the excavation and submitted for laboratory analysis of TPH, BTEX, pH, and EC. Laboratory analytical results indicated that benzene and TPH concentrations in soil sample E01@4' exceeded COGCC Table 910-1 allowable levels at concentrations of 0.318 mg/kg and 1,093 mg/kg, respectively. On March 4 and 6, 2016, following removal of additional impacted soil to the east of the partially buried produced water sump, four additional sidewall soil samples (N03@4', E02@4', E03@4', and S03@4') and two additional confirmation base soil samples (B03@6' and B04@6') were collected from the excavation for laboratory analysis of TPH, BTEX, pH, and EC. Laboratory analytical results indicated that TPH, BTEX, pH, and EC levels were in compliance with COGCC Table 910-1 allowable levels at the extent of the excavation. Approximately 240 cubic yards of soil were excavated and transported to the Buffalo Ridge Landfill in Keenesburg, Colorado, for disposal. The general site layout, release location, excavation dimensions, and soil sample locations are depicted on the Excavation Site Map provided as Figure 2. The soil sample analytical results are summarized in Table 1 and the laboratory analytical reports are attached.

Additional Spill Details Not Provided Above:

No further action is required. Laboratory analytical results for the confirmation soil samples indicated that TPH, BTEX, pH, and EC concentrations were in compliance with COGCC Table 910-1 allowable levels at the extent of the excavation. Based on the confirmation soil sample analytical results, Kerr-McGee is requesting an NFA status for this site.

### CORRECTIVE ACTIONS

#1 Supplemental Report Date: 03/10/2016

Cause of Spill (Check all that apply)  Human Error  Equipment Failure  Historical-Unknown  
 Other (specify) The cause of the release is still under investigation.

Describe Incident & Root Cause (include specific equipment and point of failure)

At the Barclay-63N66W/27NWNW tank battery, an operator discovered surface soil staining within the bermed tank battery. The cause of the release is still under investigation. The volume of the release is unknown.

Describe measures taken to prevent the problem(s) from reoccurring:

Corrective actions will be taken based on the results of the investigation. The storage tanks were replaced as a precautionary measure.

Volume of Soil Excavated (cubic yards): 240

Disposition of Excavated Soil (attach documentation)  Offsite Disposal  Onsite Treatment  
 Other (specify) \_\_\_\_\_

Volume of Impacted Ground Water Removed (bbls): 0

Volume of Impacted Surface Water Removed (bbls): 0

### REQUEST FOR CLOSURE

**Spill/Release Reports should be closed when impacts have been remediated or when further investigation and corrective actions will take place under an approved Form 27.**

Basis for Closure:  Corrective Actions Completed (documentation attached)

Work proceeding under an approved Form 27

Form 27 Remediation Project No: \_\_\_\_\_

### OPERATOR COMMENTS:

Environmental	Based on review of information presented it appears that no further action is necessary at this time. However, should future conditions at the site indicate contaminant concentrations in soils exceeding COGCC standards or if ground water is found to be significantly impacted, further investigation and/or remediation activities may be required at the site.	3/11/2016 1:27:48 PM
