Inspector Comment:

Inspection was performed in response to Complaint #200439230. Complainant was concerned about work that has been performed at location specifically if there is any soil or groundwater contamination. Synergy reported historic flowline release on 12/10/15 (Spill Doc #400951704). They performed source removal and delineated the extent of soil and groundwater impacts. Information was provided in Form 27 (Remediation Project #9504) submitted to COGCC 2/16/16. Synergy proposed soil shredding to treat additional impacted soil and implemented the plan in February 2016. Final documentation is pending. Production facilities were still dismantled at time of inspection. Location was covered with snow from recent storm. No open excavations were observed. Checked stream adjacent to location and did not observe any sediment transport into the stream or any areas of hydrocarbon sheen. Synergy is continuing to complete the remedial actions and restore surface under the approved Form 27.

Tracking Num	Category	Assigned To	Description	Incident Date
200439230	GROUND WATER	Axelson, John	<p>Location is described as E 168th Ave and Weld Co Rd 11. Standley Well Owner: Synergy</p> <p>Complainant states: Synergy has been doing major construction on site for several weeks with moving dirt, etc. No notice was given to neighbors so we are assuming they are not adding to the wells. It appears they are replacing aging pipes that are corroded. That is of concern - we would like to know if that has led to any ground water contamination or exposure - any spills and soil contamination. They have left big holes in the ground and rain and snow melt has accumulated in open pits/holes. I can provide pictures if necessary. Concern with corroded pipes -has it led to any ground water contamination?</p>	03/22/2016
