*As defined in COGCC 100-Series Rules*

Describe what is known about the spill/release event (what happened -- including how it was stopped, contained, and recovered):

COGCC Inspector Susan Sherman noticed the 1" nipple on the back side of the flow-T, on our wellhead, had split and caused a leak of 1-2 bbls of produced water. The water leaked from the wellhead and down the hill from the pad about 10 feet and pooled in a low-area on the surface. The leaking nipple has been replaced.

**OPERATOR COMMENTS:**

Please see the attached for the recent analytical results to close out this spill. We tilled gypsum into the ground in order to bring the soil contamination down to be within the Table 910 standards. No reclamation is needed since the spill did not leave the facility site.

I hereby certify all statements made in this form are to the best of my knowledge true, correct, and complete.
