## Operator Comments:

While reviewing paperwork submitted for the remediation #s 8583 & 8581, we noticed the supporting documents to complete this pit remediation (8580) were not filed. Proper testing was performed prior to backfill, with results below Table 910-1 values. We apologize for the delay submitting these results to the Commission.

I hereby certify all statements made in this form are, to the best of my knowledge, true, correct, and complete.

Agency	Based on review of information presented, it appears that no further action is necessary at this time, and COGCC approves the closure request. However, should future conditions at the site indicate contaminant concentrations in soils exceeding COGCC standards or if ground water is found to be significantly impacted, then further investigation and/or remediation activities may be required at the site. Materials with pH, SAR, or EC concentrations exceeding Table 910-1 levels may be buried under a minimum of three (3) feet of backfill cover and soil that satisfies either the Table 910-1 levels for pH, SAR, and EC or the background levels for such contaminants within three (3) feet of the ground surface at the site. In addition, soil horizons must be replaced in their original relative position and reclaimed in accordance with 1000 Series Rules, including the establishment of vegetative cover on non-cropland and successful crop growth on cropland.	4/11/2016 11:14:18 AM
Routing Review	A task has been opened for S. Spencer (Environmental Group) to review the document.	4/11/2016 8:24:36 AM
