

Photo 1. View of the project area from the well pad entrance facing center.

Photo 2. View of area in the northeastern portion of the project area with salt crust that is likely the result of water ponding and evaporating. The only vegetation observed here is dense kochia (*Kochia scoparia*).

Photo 3. View of the northern portion of the project area from the northeastern corner facing westward. This area is largely weedy and needs revegetation. Adjacent pasture is comprised of healthy irrigated grasses.

Photo 4. View of the eastern portion of the project area from the northeastern corner facing southward. Vegetation is nearly 100 percent kochia in this area.

Photo 5. View of the southern portion of the project area from the southeastern corner facing westward.

Photo 6. View Canada thistle (*Cirsium arvense*) growing amongst kochia debris near the well pad entrance.
