## SITE INVESTIGATION AND REMEDIATION WORKPLAN

This form shall be submitted to the Director for approval prior to the initiation of site investigation and remediation activities. Form 27 is intended to be used whenever possible. Additional documentation will be required when large volumes of soil and groundwater have been impacted or involve large facilities with multiple source areas. See Rule 910. Attach as many pages as needed to fully describe the proposed work.

### REMEDIATION WORKPLAN

Describe initial action taken (if previously provided, refer to that form or document):

The location of the CS28 Pit is shown on the attached Figure 1. Initial work at this location consisted of removal of the netting material and posts in order to access the pit. These materials were segregated and stockpiled for recycle and/or disposal. Excess liquids (approximately 40 barrels) were removed with a vacuum truck for recycling at the Chevron Operations Facility. All piping to the pits was disconnected at the Collection Station and removed from the pit to approximately 30-feet from the pit footprint. The piping was then transported to a stockpile area for recycling.

Describe how source is to be removed:

Impacted material was identified by field screening techniques including visual identification of staining, odors in the soil, and by use of a photoionization detector (PID). Based on screening, impacted soil was excavated from the pit, loaded on to trucks, and hauled to the Chevron-operated land farm for management. A total of 2,460 CY of impacted material from this pit was hauled to the land farm. No groundwater was encountered during the excavation of this pit. Discrete confirmation samples were collected from each of the four walls of the excavation and from the floor. Samples were collected based on guidance from rule 910.b(2)B which included collected samples from the area most suspected of having impacts based on field screening techniques. All sample locations from the pit walls and bottom were surveyed using a global positioning system (GPS) device. Table 1 listing the sample results and Figure 2 illustrating the sample locations in relation to the original pit location are attached to this form.

Describe how remediation of existing impacts is to be accomplished, including removal and disposal at an injection well or licensed facility, land treatment on site, removal of impacted groundwater, insitu bioremediation, burning of oily vegetation, etc.:

Excess liquids removed by vacuum truck were recycled at the Chevron-operated water treatment facility. Impacted soil was loaded and transported by truck to Chevron-operated landfarm in Rangely CO for management.

If groundwater has been impacted, describe proposed monitoring plan (# of wells or sample points, sampling schedule, analytical methods, etc.):  
No groundwater was encountered or impacted during remediation activities.

Describe reclamation plan. Discuss existing and new grade recontouring; method and testing of compaction alleviation; and reseeding program, including location of new seed, seed mix and noxious weed prevention. Attach diagram or drawing. Use additional sheet for description if required.

Following impacted soil excavation and confirmation that all soil sample results were below the COGCC allowable limits as listed in Table 910-1 of the COGCC Rules and Regulations, the excavation was backfilled and wheel compacted with clean imported soil. The attached Table 1 lists the results from all the samples. As shown, the initial sample results from the south wall exceeded the COGCC allowable limits. Further excavation was performed and the area was resampled. Following the additional excavation, soil in the south wall area was below the COGCC allowable limits. Samples were collected from the backfill material to ensure that at least 3 feet of clean import material was placed and compacted as a final backfill layer in the excavation. The area was graded to match existing contours and drainage at the plant. The area was reseeded to comply with COGCC 1004 rules including reseeding using the suggested BLM mix #8 seed mix.

Attach samples and analytical results taken to verify remediation of impacts. Show locations of samples on an onsite schematic or drawing.

Is further site investigation required?  Y  N If yes, describe:

All final confirmation sample results were below COGCC allowable limits except sodium adsorption ratio (SAR), specific conductivity (EC), and arsenic. SAR exceedances ranges from 29 to 74 and EC exceedances ranged from 4.3 to 28 mmhos/cm. Results from backfill samples ranged from 6.9 - 8.2 SAR which is below the COGCC allowable limits for SAR. All arsenic exceedances were within the same range of concentrations as the background sample collected outside of the pit area. COGCC provided approval to backfill the pit following discussions of the analytical results. These remediation actions and results of confirmations samples collected indicate that no further remedial action is required at the pit.

Final disposition of E&P waste (landtreated and disposed onsite, name of licensed disposal facility, recycling, reuse, etc.):

Proposed waste disposition will be at the Chevron-operated Landfarm in Rangely, CO or a local disposal facility.

Batch 75149, Method ICP\_6010\_S, Sample 15071023-06A: The MS and MSD recoveries were outside of the control limit for Barium, Nickel, and Zinc; however, the result in the parent sample is greater than 4x the spike amount. No qualification is required for this analyte.

Batch 75149, Method ICP\_6010\_S, Sample 15071023-06AMS: The MS recovery was above the upper control limit for Chrome. The corresponding result in the parent sample may be biased high for this analyte.

Batch 75149, Method ICP\_6010\_S, Sample 15071023-06AMSD: The MSD recovery was outside of the control limit for Copper. However, the MS recovery and the RPD between the MS and MSD was in control. No qualification is required for this analyte.

Batch 75155, Method HG\_7471\_S, Sample 15071023-06A: Analysis requested after hold time expired.

No other deviations or anomalies were noted.

### **Wet Chemistry:**

Batch 75158, Method CR6\_7196\_S, Sample 15071023-06A: Sample was analyzed outside of the holding time at the request of the client. Results should be considered estimated.

Batch 75158, Method CR6\_7196\_S, Sample 15071023-06A: The MS and MSD recoveries were below the lower control limit. The corresponding result in the parent sample may be biased low for this analyte:

Batch 75166, Method PH\_9045\_S, Sample 15071023-06A: Sample was analyzed outside of the holding time at the request of the client. Results should be considered estimated.

No other deviations or anomalies were noted.

**Case Narrative**

Samples for the above noted Work Order were received on 08/07/2015. The attached "Sample Receipt Checklist" documents the status of custody seals, container integrity, preservation, and temperature compliance.

Samples were analyzed according to the analytical methodology previously transmitted in the "Work Order Acknowledgement". Methodologies are also documented in the "Analytical Result" section for each sample. Quality control results are listed in the "QC Report" section. Sample association for the reported quality control is located at the end of each batch summary. If applicable, results are appropriately qualified in the Analytical Result and QC Report sections. The "Qualifiers" section documents the various qualifiers, units, and acronyms utilized in reporting.

With the following exceptions, all sample analyses achieved analytical criteria.

**Sample Receiving:**

No deviations or anomalies were noted.

**Volatile Organics:**

No deviations or anomalies were noted.

**Extractable Organics:**

No deviations or anomalies were noted.

**Metals:**

Batch 74692, Method ICP, 6010, Sample 1508365-01AMS: The MS & MSD recoveries were outside the control limits for Barium, Nickel, and Zinc; however, the result in the parent sample is greater than 4x the spike amount. No qualification is required for these analytes.

Batch 74692, Method ICP, 6010, Sample 1508365-01AMS: The matrix spike recovery was outside of the control limit for Arsenic; however, the matrix spike duplicate recovery and the RPD between the MS and MSD were in control. No qualification is required for this analyte.

Batch 74692, Method ICP, 6010, Sample 1508365-01A: The MS & MSD recoveries were above the upper control limit for Chromium. The corresponding result in the parent sample may be biased high for this analyte.

No other deviations or anomalies were noted.

**Case Narrative**

Samples for the above noted Work Order were received on 09/05/2015. The attached "Sample Receipt Checklist" documents the status of custody seals, container integrity, preservation, and temperature compliance.

Samples were analyzed according to the analytical methodology previously transmitted in the "Work Order Acknowledgement". Methodologies are also documented in the "Analytical Result" section for each sample. Quality control results are listed in the "QC Report" section. Sample association for the reported quality control is located at the end of each batch summary. If applicable, results are appropriately qualified in the Analytical Result and QC Report sections. The "Qualifiers" section documents the various qualifiers, units, and acronyms utilized in reporting.

With the following exceptions, all sample analyses achieved analytical criteria.
