**Form 2A COAs:**

Group	User	Comment	Date
OGLA	andrewsd	Location is in a sensitive area because of shallow groundwater; therefore, either a lined drilling pit or closed loop system is required.	03/20/2014
OGLA	andrewsd	Operator must implement site-specific best management practices in accordance with good engineering practices, including, but not limited to, construction of a berm or diversion dike, site grading, or other comparable measures, sufficient to protect Black Draw located approximately 360 feet southeast and 442 feet southwest of the oil and gas location from a release of drilling, completion, produced fluids, and chemical products.	03/20/2014
Permit	colerl	Final review completed; no LGD or public comment received.	03/24/2014

**COGCC Comments**

Comment	User	Date
<b>A certified weed free mulch or equivalent soil stabilization method should be applied to the disturbed areas being reclaimed. This practice will temporarily prevent wind/stormwater erosion and will also facilitate the establishment of vegetation by providing moisture retention, among other benefits. It is advised that manure or any form of mulch that may contain a weed source not be applied.</b>	CostaR	05/03/2016

Inspector Name: COSTA, RYAN

Establish vegetation with total perennial non-invasive plant cover of at least eighty (80) percent of pre-disturbance or reference area levels. Use a seed mixture that matches the adjacent pastureland or a seed mixture requested by the landowner. Continue to monitor and manage this site until Final Reclamation has Passed.	CostaR	05/03/2016	
Submit a Form 4 when corrective actions are completed. Include photographs documenting completion of corrective actions required in this inspection.	CostaR	05/03/2016
