SPILL/RELEASE REPORT (SUPPLEMENTAL)

This form is to be submitted by the party responsible for the oil and gas spill or release. Any spill or release which may impact waters of the State must be reported as soon as practicable; any spill over 20 bbls must be reported within 24 hours and all spills over five bbls must be reported within ten days. Submit a Site Investigation and Remediation Workplan (Form 27) when requested by the Director.

Describe what is known about the spill/release event (what happened -- including how it was stopped, contained, and recovered):

On April 5, 2016, a contractor discovered a release during a routine inspection at the Deepe 34C-27HZ wellhead. More than one barrel of oil was released outside secondary containment at the wellhead area. Site assessment and remediation activities are on-going and will be summarized in a Supplemental Form 19.

How was extent determined?

On April 5, 2016, a contractor discovered a release during a routine inspection at the Deepe 34C-27HZ wellhead. Approximately 20 barrels of oil were recovered outside secondary containment following the discovery. Approximately 1,040 cubic yards of impacted material were excavated and transported to the Buffalo Ridge Landfill located in Keenesburg, Colorado for disposal. Excavation activities were guided by field screening soil for volatile organic compound (VOC) concentrations using a photoionization detector (PID). Thirty-one (31) soil samples were collected from the final extent of the excavation and surface run-off area at depths ranging between 3 feet and 15 feet below ground surface (bgs). The soil samples were submitted to Origins Laboratory in Denver, Colorado for analysis of benzene, toluene, ethylbenzene, total xylenes (BTEX), total petroleum hydrocarbons (TPH) - gasoline range organics (GRO) by USEPA Method 8260C, TPH - diesel and oil range organics (DRO and ORO) by USEPA Method 8015, electrical conductivity (EC), and pH. Analytical results indicated that constituent concentrations in soil samples collected from the final extent of the excavation and surface run-off area were below the applicable COGCC Table 910-1 standards. Based on the analytical results, Kerr-McGee is requesting a No Further Action (NFA) determination for this release. The excavation area will be backfilled and contoured to match pre-existing conditions. Soil analytical results are summarized in Table 1 and soil sample locations are illustrated in Figure 2.

CORRECTIVE ACTIONS

#1 Supplemental Report Date: 05/04/2016

Cause of Spill (Check all that apply) Human Error Equipment Failure Historical-Unknown
 Other (specify) _____

Describe Incident & Root Cause (include specific equipment and point of failure)

During routine operations, an operator discovered a release that had surfaced above the flowline. It appears that the root cause of the flowline failure is due to internal corrosion.

Describe measures taken to prevent the problem(s) from reoccurring:

The flowline will be replaced. Additional actions will be taken, if necessary, pending the results of the flowline investigation.

Volume of Soil Excavated (cubic yards): 1040

Disposition of Excavated Soil (attach documentation) Offsite Disposal Onsite Treatment
 Other (specify) _____

Volume of Impacted Surface Water Removed (bbls): 0

REQUEST FOR CLOSURE

Spill/Release Reports should be closed when impacts have been remediated or when further investigation and corrective actions will take place under an approved Form 27.

Basis for Closure: Corrective Actions Completed (documentation attached)
 Work proceeding under an approved Form 27
