During a routine site visit, the pumper responsible for the site observed a stain and what appeared to be a hole where fluid from the subsurface was being conveyed to the surface immediately north of the site's tank battery. The wells associated with that tank battery were turned off and all flowlines/dumplines near the tank battery were relieved of all fluid and pressure. The area near the stain was excavated and impacted soil near the condensate dumpline was observed.

Parachute Creek 5 (COGCC Location ID 335781)
Dumpline Release Remediation (COGCC Spill/Release Point ID 442525)
Form 19 (Notice of Completion)
Narrative Attachment

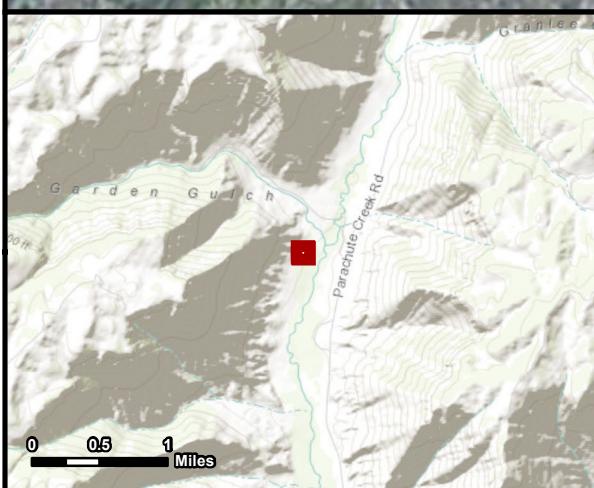

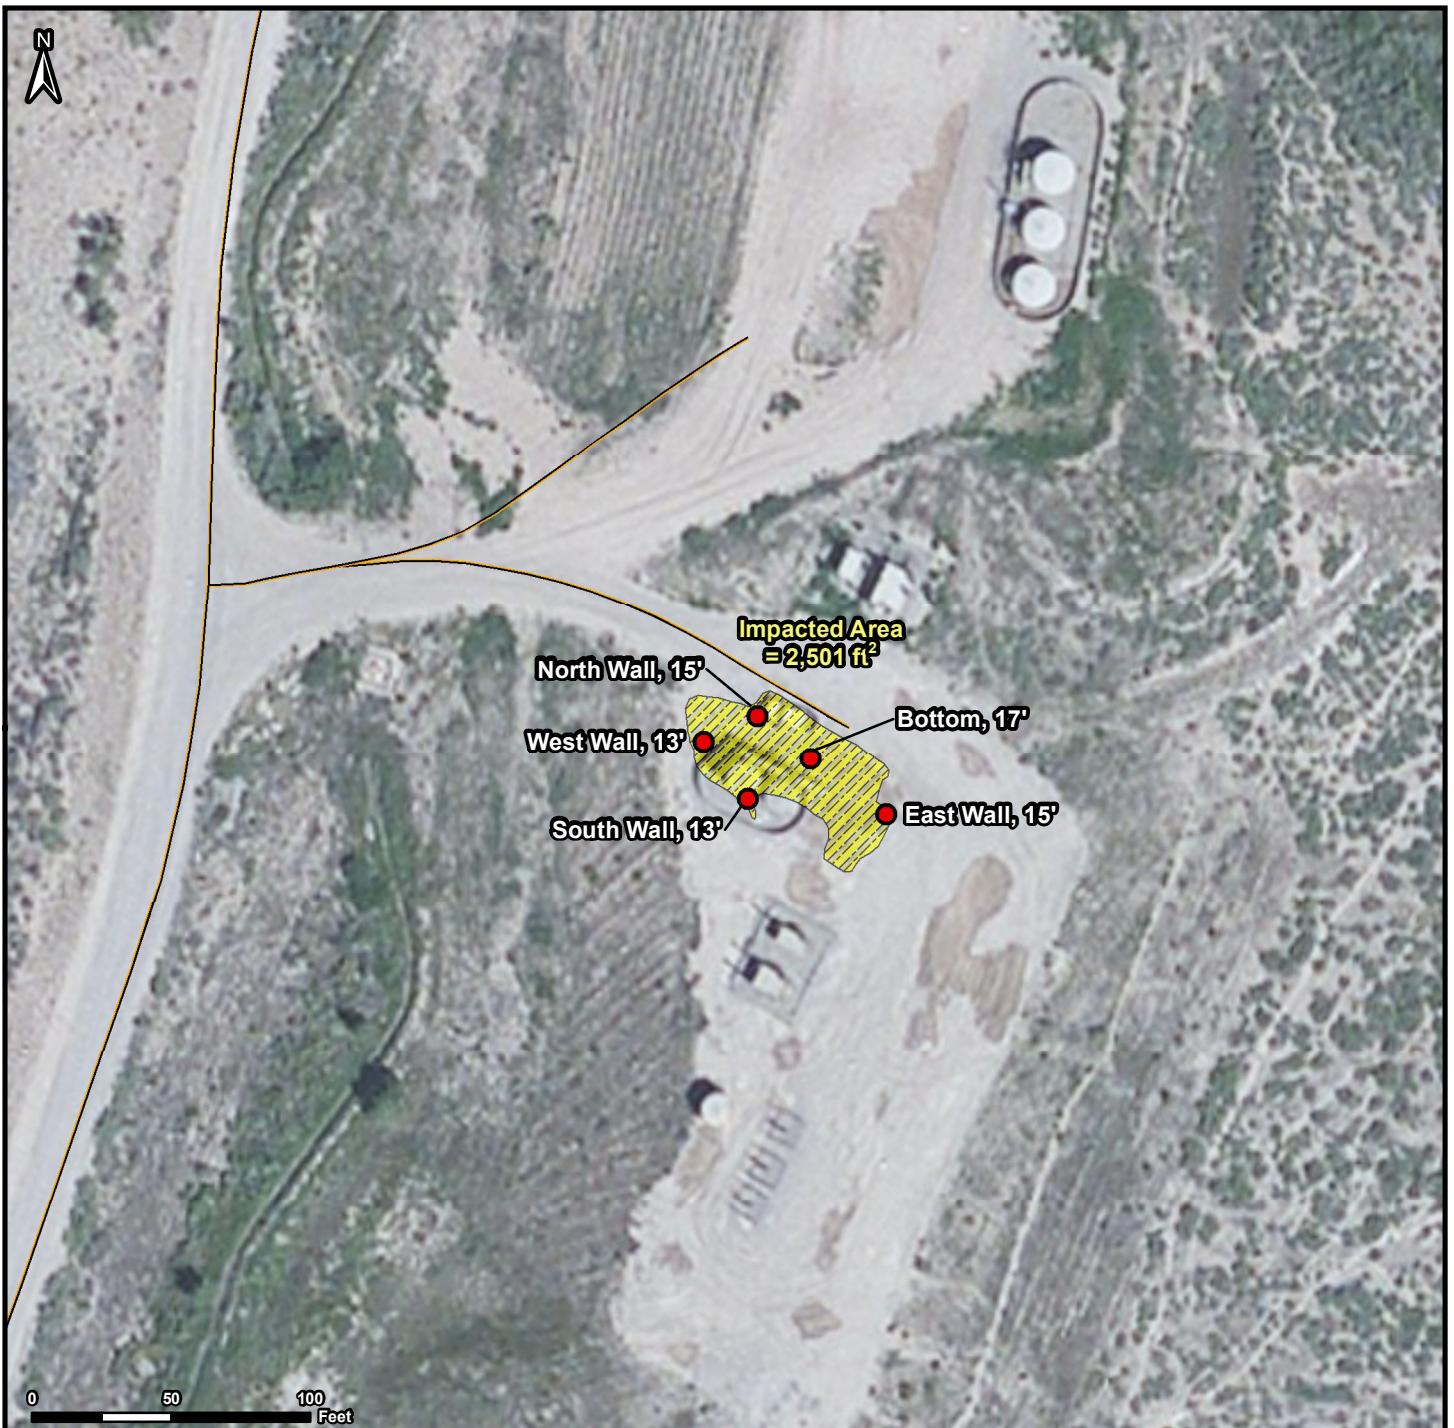

This Notice of Completion was prepared for the purpose of describing completed work associated with the removal of impacted soil discovered during the assessment of a condensate dumpline leak at the Parachute Creek 5 (Location ID 335781) pad location in the Caerus Pieceance, LLC (Caerus) area of operations. A Sample Location Map which includes the excavation extents is included as an attachment to this form.

On July 20, 2015, we began excavating using field screening equipment to determine the extents of the impacted area. On July 24, 2015, it was determined that all impacted soil had been removed. All soil removed during excavation activities was stockpiled on site within containment berms.

On July 22 and 24, 2015, confirmation soil samples were collected from the walls and base of the excavated area (North Wall, Bottom 17ft, West Wall, East Wall, and South Wall). Soil samples were submitted for laboratory analysis of all COGCC Table 910-1 analytes. Laboratory analytical results indicate all soil samples were in compliance with COGCC Table 910-1 Concentration Levels for all analytes or were within background concentrations, except for the sodium adsorption ratio (SAR) and electrical conductivity (EC) concentrations. However, these samples were collected at a depth greater than three feet below the ground surface and the COGCC does not apply the Concentration Levels for SAR and EC to soils deeper than three feet below ground surface. A background sample collected at a nearby pad (Chevron 41-8D, COGCC Location ID 324196) was used for comparison. Sample locations are depicted on the attached Sample Location Map and laboratory analytical results are summarized in the attached analytical table.

All impacted soil removed during excavation activities is stockpiled on site. On August 18, 2015, confirmation soil samples were collected from both of the stockpiles (North Stockpile and South Stockpile). The soil samples were submitted for laboratory analysis of all COGCC Table 910-1 analytes. Laboratory analytical results indicate all soil samples were in compliance with COGCC Table 910-1 Concentration Levels for all analytes or were within background concentrations, except for the SAR and EC concentrations. However, the soil represented by these samples will be buried at a depth greater than three feet below the ground surface and the COGCC does not apply the Concentration Levels for SAR and EC to soils deeper than three feet below ground surface. A background sample collected at a nearby pad (Chevron 41-8D, COGCC Location ID 324196) was used for comparison. The excavation will be backfilled using a combination of this stockpiled material, material from the Garden Gulch Road Powder Bunker, and remediated soil from the Parachute Creek 1 Landfarm.

Based on soil analytical results, Caerus requests an NFA designation for this project.

Analyses	Result	Qual	Report Limit	Units	Dilution Factor	Date Analyzed
----------	--------	------	--------------	-------	-----------------	---------------

Explanation of Qualifiers

Radiochemistry:

U or ND - Result is less than the sample specific MDC.
Y1 - Chemical Yield is in control at 100-110%. Quantitative yield is assumed.
Y2 - Chemical Yield outside default limits.
W - DER is greater than Warning Limit of 1.42
* - Aliquot Basis is 'As Received' while the Report Basis is 'Dry Weight'.
- Aliquot Basis is 'Dry Weight' while the Report Basis is 'As Received'.
G - Sample density differs by more than 15% of LCS density.
D - DER is greater than Control Limit
M - Requested MDC not met.
LT - Result is less than requested MDC but greater than achieved MDC.

M3 - The requested MDC was not met, but the reported activity is greater than the reported MDC.
L - LCS Recovery below lower control limit.
H - LCS Recovery above upper control limit.
P - LCS, Matrix Spike Recovery within control limits.
N - Matrix Spike Recovery outside control limits
NC - Not Calculated for duplicate results less than 5 times MDC
B - Analyte concentration greater than MDC.
B3 - Analyte concentration greater than MDC but less than Requested MDC.

Inorganics:

B - Result is less than the requested reporting limit but greater than the instrument method detection limit (MDL).
U or ND - Indicates that the compound was analyzed for but not detected.
E - The reported value is estimated because of the presence of interference. An explanatory note may be included in the narrative.
M - Duplicate injection precision was not met.
N - Spiked sample recovery not within control limits. A post spike is analyzed for all ICP analyses when the matrix spike and or spike duplicate fail and the native sample concentration is less than four times the spike added concentration.
Z - Spiked recovery not within control limits. An explanatory note may be included in the narrative.
* - Duplicate analysis (relative percent difference) not within control limits.
S - SAR value is estimated as one or more analytes used in the calculation were not detected above the detection limit.

Organics:

U or ND - Indicates that the compound was analyzed for but not detected.
B - Analyte is detected in the associated method blank as well as in the sample. It indicates probable blank contamination and warns the data user.
E - Analyte concentration exceeds the upper level of the calibration range.
J - Estimated value. The result is less than the reporting limit but greater than the instrument method detection limit (MDL).
A - A tentatively identified compound is a suspected aldon-condensation product.
X - The analyte was diluted below an accurate quantitation level.
* - The spike recovery is equal to or outside the control criteria used.
+ - The relative percent difference (RPD) equals or exceeds the control criteria.
G - A pattern resembling gasoline was detected in this sample.
D - A pattern resembling diesel was detected in this sample.
M - A pattern resembling motor oil was detected in this sample.
C - A pattern resembling crude oil was detected in this sample.
4 - A pattern resembling JP-4 was detected in this sample.
5 - A pattern resembling JP-5 was detected in this sample.
H - Indicates that the fuel pattern was in the heavier end of the retention time window for the analyte of interest.
L - Indicates that the fuel pattern was in the lighter end of the retention time window for the analyte of interest.
Z - This flag indicates that a significant fraction of the reported result did not resemble the patterns of any of the following petroleum hydrocarbon products:
- gasoline
- JP-8
- diesel
- mineral spirits
- motor oil
- Stoddard solvent
- bunker C
