Describe what is known about the spill/release event (what happened -- including how it was stopped, contained, and recovered):

Wing nuts on the back hatch of contractor transport trailer broke releasing more than 5bbls of produced water outside secondary containment on the Weideman 29K-343 location. Spill was immediately vacuumed up (including existing puddles on ground) by onsite equipment. Once all water was removed the surface was regraded. The following day the location was inspected for residual residue and none was found.
