As defined in COGCC 100-Series Rules

Describe what is known about the spill/release event (what happened -- including how it was stopped, contained, and recovered):

During routine operations at the Kerr 29C-12HZ well, a flowline failure was discovered. Approximately 1 barrel of oil surfaced above the flowline approximately 150 feet west of the wellhead. Excavation and cleanup activities are ongoing at the site. Confirmation soil samples will be collected from the excavation and submitted for laboratory analysis of TPH, BTEX, pH, EC, and SAR (if applicable). The analytical results and excavation details will be provided in a supplemental report. A topographic Site Location Map showing the general location of the release is attached as Figure 1.
