COMMENTS:

Bonanza respectfully requests approval to flare the subject well for 7 days by producing the well directly to a temporary frac tank. The estimated total volume we anticipate flaring is 450 Mscf. The subject well is located in a flood zone and there is no infrastructure on location to produce the gas. Bonanza estimates it would cost roughly \$70,000.00 in capital to connect this well. This well has an average flow rate of 6 Mscf/hr which does not generate an adequate payout to warrant this investment at this point in time. Bonanza has complied with all site specific permitting required by the Colorado Department of Public Health and Environment, Air Pollution Control Commission (CDPHE) regulations as set forth in 805. b. (1). A representative gas analysis for this well is attached from the Perkins wells which produce from the same formation and are nearby.

H2S REPORTING

Data Fields in this section are intended to document Sample and Location Data associated with the collection of a Gas Sample that is submitted for Laboratory Analysis.

Gas Analysis Report must be attached.

H2S Concentration: _____ in ppm (parts per million) Date of Measurement or Sample Collection _____

Description of Sample Point:

Absolute Open Flow Potential _____ in CFPD (cubic feet per day)

Description of Release Potential and Duration (If flow is not open to the atmosphere, identify the duration in which the container or pipeline would likely be opened for servicing operations.):

Distance to nearest occupied residence, school, church, park, school bus stop, place of business, or other areas where the public could reasonably be expected to frequent: _____

Distance to nearest Federal, State, County, or municipal road or highway owned and principally maintained for public use: _____
